**Science Education in Canada** Christine D. Tippet, Todd M. Milford, 2019-07-01 This book offers a meso level description of demographics science education and science teacher education Representing all 13 Canadian jurisdictions the book provides local insights that serve as the basis for exploring the Canadian system as a whole and function as a common starting point from which to identify causal relationships that may be associated with Canada's successes The book highlights commonalities consistencies and distinctions across the provinces and territories in a thematic analysis of the 13 jurisdiction specific chapters Although the analysis indicates a network of policy and practice issues warranting further consideration the diverse nature of Canadian science education makes simple identification of causal relationships elusive Canada has a reputation for strong science achievement However there is currently limited literature on science education in Canada at the general level or in specific areas such as Canadian science curriculum or science teacher education This book fills that gap by presenting a thorough description of science education at the provincial territorial level as well as a more holistic description of pressing issues for Canadian science education

**Quantum Mind and Social Science** Alexander Wendt, 2015-04-20 There is an underlying assumption in the social sciences that consciousness and social life are ultimately classical physical material phenomena In this ground breaking book Alexander Wendt challenges this assumption by proposing that consciousness is in fact a macroscopic quantum mechanical phenomenon In the first half of the book Wendt justifies the insertion of quantum theory into social scientific debates introduces social scientists to quantum theory and the philosophical controversy about its interpretation and then defends the quantum consciousness hypothesis against the orthodox classical approach to the mind body problem In the second half he develops the implications of this metaphysical perspective for the nature of language and the agent structure problem in social ontology Wendt's argument is a revolutionary development which raises fundamental questions about the nature of social life and the work of those who study it

calculators were invented and the project to create more complex thinking machines began in earnest But the seeds were sown many hundreds of years earlier deep in antiquity Naydler paints a vast panorama depicting human development and the emergence of electronic technology His painstaking research illuminates an urgent question that concerns every living person today What does it mean to be human and what if anything distinguishes us from machines
