Real Time System by Jane W. S. Liu Chapter 3.1 Solution

Q. 3.1: Because sporadic jobs may have varying release times and execution times, the periodic task model may be too inaccurate and can lead to undue under utilization of the processor even when the inter release times of jobs are bounded from below and their executions are bounded from above. As an example, suppose we have a stream of sporadic jobs whose inter release times are uniformly distributed from 9 to 11. Their execution times are uniformly distributed from 1 to 3.

a. What are the parameters of the periodic task if we were to use such a task to model the stream?
