Guide Todd Erickson, Russell Barrett, David Merritt, Kingsley Dixon, 2016-04 The Pilbara region in Australia's arid northwest is rich in flora that is suited to extreme temperatures and boom and bust cycles of moisture availability. It is also a region important for its natural resources. In places where mining activities have finished and the land is under management for ecological restoration, there is increasing demand for information about native plant communities and the biology of their seeds. *Pilbara Seed Atlas and Field Guide* is the first book to combine plant identification with robust scientific criteria for cost-effective seed-based rehabilitation. It describes 103 regional plant taxa and provides guidelines for effective collection, cleaning, storage, and germination of their seeds. It addresses issues such as timing of collection, quality and viability of seed, and dormancy release, which are essential for successful restoration programs. With photographs to portray the subtle differences and unique features of each species' biology, this book will be of great use to practitioners in the field, including environmental consultants, rehabilitation companies, commercial seed collectors, and government authorities, as well as naturalists and people interested in growing the Pilbara's remarkable plants. *Eastern Alpine Guide* Mike Jones, Liz Willey, 2018-04-03 Explore the wonders of eastern North America's alpine regions. **Imperfect Balance** David Lewis Lentz, 2000 Together with experts in a variety of disciplines in the natural and social sciences, including botany, geology, ecology, geography, and archaeology, Lentz investigates the history and effects of human impact on the environment in the New World before the arrival of the Europeans in the late 15th century. *An Imperfect Balance* offers an objective evaluation of precontact-era land usage, demonstrating that native populations engaged in land management practices not entirely dissimilar to their European counterparts. *Field Guide to the Rare Plants of Georgia* Linda G. Chafin, 2007 Abundantly illustrated with more than 400 color photographs and 200 detailed drawings, this comprehensive guide to the state's rare and endangered plants provides photographs and botanical illustrations in a single volume formatted for field use. More than 200 species are covered, including two dozen that are federally listed and 170 plus that are listed as Threatened, Endangered, Rare, or of Special Concern by the Georgia Department of Natural Resources. The guide is designed for easy nontechnical identification of species in the field. Color photographs show the plants in their natural surroundings, and drawings emphasize the most distinctive parts of the plants. Packed with information about the plants as well as their habitats and management, the guide facilitates the quick recognition of rare species, encourages awareness of their distribution and ecological significance, and provides guidelines for ensuring their survival. Additional features include directions for using the guide, a map of Georgia's counties, descriptions of the natural communities of Georgia, references for further reading, a glossary of frequently used terms, and indexes of scientific and common plant names. The guide also includes a chapter by Jennifer Ceska and University of Georgia horticulture professor James Affolter, founding members of the Georgia Plant Conservation Alliance, on horticultural requirements of rare species and the role of GPCA in their protection. This is a valuable resource for students, wildflower enthusiasts, botanists, land managers, and environmental decision makers. Each species account includes one or
