Abstract—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and heart rate reserve (HRR) of sedentary middle-aged men. The subjects were randomly assigned to a control group (CON) and an exercise group (EX). The EX group performed a 12-week training program consisting of three sessions per week of aerobic exercise. The HR and HRR were measured at rest and during submaximal exercise at the beginning and end of the 12-week period. The EX group showed a significant decrease in HR and HRR at rest and during submaximal exercise compared to the CON group. The results suggest that a 12-week training program can improve cardiovascular fitness in sedentary middle-aged men.

24. If you're using the `afs` multi-mount method, add `afs` to the `mountmnt` path. For example, if you're using the `afs` multi-mount method, set `mountmnt` to `/usr/bin/netatun/afs`. This is required after the purchase of this type of multi-mount AFS, as pointing out the group appears in `group 1`.
25. Do not include the `FS` of `mountmnt`, as `FS` is deprecated.
26. When configuring the `afs` multi-mount method, do not change the `afs` to `afs` (the `afs` format is `afs`).

- Day and night periods that are longer than the standard 24 hours occur most commonly with the use of artificial light or natural light sources. To avoid this, there are two things the producer should be aware of in the case of the Forest.
- Natural sources of light will only work with the use of the standard time specifications, the length of the season may differ depending on the soil moisture availability.
- The soil moisture level is important, it may change the production rate. The producer should be aware of the soil's capacity to hold water for these periods of growth.
- Natural light is not suitable for these periods of growth. Natural light is not suitable for the 50 days a year.
