have considerable often deadly consequences including combat surgery and aviation Although there exists considerable
literature on debriefing recent reviews of the literature suggest a shortcomings in the topics researched b paucity of related
theory c limitations in the number of empirical studies and d problems in research design There are also recent suggestions
that there are surprisingly studies in the scholarly literature that show how to debrief how to teach or learn to debrief what
methods of debriefing exists and how effective they are at achieving learning objectives and goals Meta analyses reveal
substantial variations in research findings e g on the use of video as a means of debriefing that can be traced to the problems
This book redresses these problems in that it provides a detailed look at debriefing and assessment the functions of different
cognitive artifacts used and a theoretical framework that accounts for the complexity of flying an aircraft and for the

debriefing of the pilots experiences especially under the high stakes condition of their bi annual evaluation for licensing purposes The book provides detailed investigation of flight examiners methods to arrive at assessments of aviation pilot performance It shows and theoretically models why there are good reasons for lower than desired inter rater agreements It offers detailed scenarios of how debriefing can be made to draw maximum benefit for pilot learning that is for the take home messages that will make them better pilots The theoretical framework includes objective factors that determine performance and the subjective experience pilots have while undergoing training and testing in flight simulators *Government*
