## SIBERIAN WHEATGRASS *Agropyron fragile* (Roth) P. Candargy Plant Symbol = AGFR

Contributed by: USDA NRCS Idaho State Office

Loren St. John  
USDA, NRCS Idaho PMOC

### Alternate Names

*Agropyron cristatum* (L.) Gaertn. ssp. *fragile* (Roth)  
A. Löve

### Uses

**Grazing/rangeland/hayland:** Crested wheatgrass is commonly recommended for forage production. It is palatable to livestock and wildlife and is a desirable feed in spring, and in the fall if it re-grows enough. It is used for cattle and horse winter forage, but protein supplements are required to ensure good animal health. It withstands heavy grazing pressure (65% use and greater) once stands are established. The best forage types in order are Siberian, desertorum, and Hycroset.

**Erosion control/reclamation:** Crested wheatgrasses are useful for soil stabilization. They compete well with other aggressive introduced grasses, but because of this trait, they are not compatible in mixes with native species. Their drought tolerance, fibrous root systems, and good seedling vigor make these species ideal for reclamation in areas with 8 to 20 inches annual precipitation. These grasses can be used in urban areas where irrigation water is limited to provide ground cover and to stabilize ditchbanks, dikes, pipelines, powerlines and roadsides.

**Wildlife:** Birds and small rodents eat crested wheatgrass seeds; deer, antelope and elk graze it, especially in spring and fall. Upland and song birds utilize stands for nesting.

### Status

Please consult the PLANTS Web site and your State Department of Natural Resources for this plant's current status (e.g. threatened or endangered species, state noxious status, and wetland indicator values).

### Description

Crested wheatgrasses *Agropyron cristatum*, *Agropyron desertorum*, and Siberian wheatgrass *Agropyron fragile* are perennial grasses commonly seeded in the western United States. They are long-lived, cool season, drought tolerant, introduced grasses with extensive root systems. Crested wheatgrass grows from 1 to 3 feet tall and seed spikes may be 1.5 to 3 inches long. Spiklets flattened, closely overlapping, located divergent (flatwise) at a slight angle on the rachis flower stem. The lemmas generally narrow to a short awn and glumes are firm, keeled, tapering into a short bristle. Culms are erect, in a dense tuft and leafy. Leaves are flat, smooth below, slightly coarse above and vary in width from 2 to 6 mm.

### Adaptation and Distribution

Crested wheatgrasses are adapted for non-irrigated seedings where annual precipitation averages 8 inches or more and where the frost free period is generally less than 140 days. On droughtier sites with 8 inches or less annual precipitation, Siberian wheatgrass may be the best choice; it is known to surpass the desertorum and Hycroset types in rate of establishment, stand persistence, and total forage yield on the more arid sites. Siberian wheatgrass has been seeded in areas with as little as 5 inches of

# Plant Guide For Siberian Wheatgrass Agropyron Fragile

**Loraine Degraff**

**Plant Guide For Siberian Wheatgrass Agropyron Fragile:**

As recognized, adventure as capably as experience not quite lesson, amusement, as with ease as deal can be gotten by just checking out a book **Plant Guide For Siberian Wheatgrass Agropyron Fragile** as a consequence it is not directly done, you could acknowledge even more all but this life, a propos the world.

We pay for you this proper as well as simple showing off to acquire those all. We allow Plant Guide For Siberian Wheatgrass Agropyron Fragile and numerous ebook collections from fictions to scientific research in any way. in the course of them is this Plant Guide For Siberian Wheatgrass Agropyron Fragile that can be your partner.
