

12. The genus and species names are collectively referred to as the scientific name. It is written in a form known as binomial nomenclature, a two-term Latin naming system. There are three rules for writing a scientific name using this system. Analyze the information in Model 2 to complete the rules below.

Rule 1: The scientific name is always written in 2 terms, with the genus name written first and the species name second.

Rule 2: The scientific name is always written in Latin. If it is from another language, it is written as written or understood.

Rule 3: The first letter of the genus name is a capital letter.

13. This system is used all over the world. Why do you think Latin is used instead of a more common language?

Latin is a common language. It's used all over the world. It's a dead language, so it's not changing.

14. Using this system, would it be possible for two different species to have the same name?

No

15. In Linnaeus's time, classification was based on the appearance of organisms. Think about the appearance of organisms such as walrus and frog, shark and dolphin, and penguin and eagle. What are the limitations of classifying organisms by only their appearance?

You may still be classifying things together that are not together. You may have some similarities, but they are not closely related.

16. Considering advances in science, discuss with your group what might be a more reliable way to classify organisms. List at least three additional ways besides appearance.

- Behaviors
- ways to obtain food
- Adaptations to environment
- DNA analysis
