Rheology Applied in

Polymer Processing B.R. Gupta, 2022-11-17 This book covers a wide range of topics in polymer rheology. These are Basic Principles, parameters, systems, and applied mathematical models used in the rheological studies. Melt flow analysis of different non-Newtonian fluids in laminar flow, transition between laminar and turbulent flow, and modified Reynolds number. The effects of different physical and molecular parameters on the purely viscous rheological response of polymer melts and solutions. Principles of rheometry and different types of viscometers and on-line rheometers. The static and dynamic viscoelastic response of the polymer melts and solutions, viscoelasticity, mechanical models, and Boltzmann superposition principle. Molecular structure, viscoelasticity relationship, and linear and non-linear viscoelasticity. Effects of different processes, materials, parameters like temperature, fillers, micro and nano fillers, and molecular parameters like MW, MWD. The role of rheology in polymer processing in different equipment. Modified power law constants and two-range power law constants for a large number of polymers. Rheology software program in Java, comparison of different polymer rheological models using the rheology software, and answers to the problems. The book will be very useful to both undergraduate and postgraduate students as well as teachers and practicing rheologists.

Polymer Synthesis and Characterization

Stanley R. Sandler, Wolf Karo, JoAnne Bonesteel, Eli M. Pearce, 1998-05-21 This laboratory manual covers important techniques for polymer synthesis and characterization and provides newcomers with a comprehensive introduction to the basic principles of highlighted techniques. The reader will benefit from the clear writing style and straightforward approach to fairly complex ideas. The book also provides references that the more advanced reader can use to obtain in-depth explanations of techniques. Polymer Synthesis and Characterization will serve as a useful resource for industrial technicians and researchers in polymer chemistry and physics, material science, and analytical chemistry. Combines the extensive industrial and teaching experience of the authors. Introduces the user to the concept of Good Manufacturing Practice. Presents experiments that are representative of a wide variety of polymerization and characterization methods. Includes numerous references for more advanced students, technicians, and researchers.
