Research on Physics Education E.F. Redish, M. Vicentini, 2004-08-09 Physics Education research is a young field with a strong tradition in many countries. However, it has only recently received full recognition of its specificity and relevance for the growth and improvement of the culture of Physics in contemporary Society for different levels and populations. This may be due on one side to the fact that teaching therefore education is part of the job of university researchers and it has often been implicitly assumed that the competences required for good research activity also guarantee good teaching practice. On the other side and perhaps more important is the fact that the problems to be afforded in doing research in education are complex problems that require a knowledge base not restricted to the disciplinary physics knowledge but enlarged to include cognitive science, communication science, history and philosophy. The topics discussed here look at some of the facets of the problem by considering the interplay of the development of cognitive models for learning Physics with some reflections on the Physics contents for contemporary and future society with the analysis of teaching strategies and the role of experiments, the issue of assessment and cultural aspects. Information is also given on the organizations involved in connecting various aspects of Physics Education: the International Commission on Physics Education, the European Physical Society and the European Physics Education Network.

Coronavirus Drug Discovery Chukwuebuka Egbuna, 2022-07-06 Coronavirus Drug Discovery Volume Three: Druggable Targets and In Silico Update presents comprehensive information on drug discovery against COVID-19. Chapters in Part One of this volume describe the various druggable targets and associated signaling pathways for effective targeting of SARS-CoV-2. In Part Two, chapters discuss the various computational approaches and in silico studies against SARS-CoV-2. Written by a global team of experts, this book is an excellent resource that will be extremely useful to drug developers, medicinal chemists, pharmaceutical companies, R&D research institutes in both academia and industry, and the National Library of Medicine and Health. In addition, agencies such as the National Institutes of Health, Centers for Disease Control and Prevention, World Health Organization, European Medicines Agency, the US Food and Drug Administration, and all others involved in drug discovery against COVID-19 will find this book useful. It discusses the pathogenic mechanisms of SARS-CoV-2 and druggable targets, reviews the various signaling pathways associated with SARS-CoV-2 as possible druggable targets, presents computational approaches and in silico studies against SARS-CoV-2.

 Education,1971 Anglo-Saxon Graves and Grave Goods of the 6th and 7th Centuries AD Alex Bayliss,2017-07-05 The Early
 Anglo Saxon Period is characterized archaeologically by the regular deposition of artefacts in human graves in England The
 scope for dating these objects and graves has long been studied but it has typically proved easier to identify and enumerate
 the chronological problems of the material than to solve them Prior to the work of the project reported on here therefore
 there was no comprehensive chronological framework for Early Anglo Saxon Archaeology and the level of detail and
 precision in dates that could be suggested was low The evidence has now been studied afresh using a co ordinated suite of
 dating techniques both traditional and new a review and revision of artefact typology seriation of grave assemblages using
 correspondence analysis high precision radiocarbon dating of selected bone samples and Bayesian modelling using the
 results of all of these These were focussed primarily on the later part of the Early Anglo Saxon Period starting in the 6th
 century This research has produced a new chronological framework consisting of sequences of phases that are separate for
 male and female burials but nevertheless mutually consistent and coordinated These will allow archaeologists to assign grave
 assemblages and a wide range of individual artefact types to defined phases that are associated with calendrical date ranges
 whose limits are expressed to a specific degree of probability Important unresolved issues include a precise adjustment for
 dietary effects on radiocarbon dates from human skeletal material Nonetheless the results of this project suggest the
 cessation of regular burial with grave goods in Anglo Saxon England two decades or even more before the end of the seventh

century That creates a limited but important discrepancy with the current numismatic chronology of early English sceattas The wider implications of the results for key topics in Anglo Saxon archaeology and social economic and religious history are discussed to conclude the report *Cross-Cultural Communication* B.
