Let $f(x) = 16x^4 - 24x^2 + 4$. Graph f and g on the same coordinate plane. Describe g as a transformation of f .

$$g(x) = f\left(\frac{1}{2}x\right)$$

$$g(x) = 16\left(\frac{1}{2}x\right)^4 - 24\left(\frac{1}{2}x\right)^2 + 4$$

$$g(x) = x^4 - 3x^2 + 4$$

$g(x)$ is a horizontal stretch of $f(x)$.

Practice C Transforming Polynomial Functions:

Precalculus Cynthia Y. Young, 2010-01-19 Engineers looking for an accessible approach to calculus will appreciate Young's introduction. The book offers a clear writing style that helps reduce any math anxiety they may have while developing their problem solving skills. It incorporates Parallel Words and Math boxes that provide detailed annotations which follow a multi-modal approach. Your Turn exercises reinforce concepts by allowing them to see the connection between the exercises and examples. A five step problem solving method is also used to help engineers gain a stronger understanding of word problems.

Lectures on Applied Mathematics Hans-Joachim Bungartz, Ronald W. Hoppe, Christoph Zenger, 2012-12-06 When the DFG Deutsche Forschungsgemeinschaft launched its collaborative research centre or SFB Sonderforschungsbereich 438 Mathematical Modelling Simulation and Verification in Material Oriented Processes and Intelligent Systems in July 1997 at the Technische Universität München and at the Universität Augsburg southern Bavaria got its second nucleus of the still young discipline scientific computing. Whereas the first and older one FORTWIHR the Bavarian Consortium for High Performance Scientific Computing had put its main emphasis on the supercomputing aspect this new initiative was now expected to focus on the mathematical part. Consequently throughout all of the five main research topics: A adaptive materials and thin layers, B adaptive materials in medicine, C robotics, aeronautics and automobile technology, D microstructured devices and systems and E transport processes in flows mathematical aspects play a predominant role. The formation of the SFB 438 and its scientific program are inextricably linked with the name of Karl Heinz Hoffmann. As full professor for applied mathematics in Augsburg 1981-1991 and in München since 1992 and as dean of the faculty of mathematics at the TU München he was the driving force of this fascinating but not always easy to realize idea of bringing together scientists from mathematics, physics, engineering, informatics and medicine for joint efforts in modern applied mathematics. However scarcely work had begun when the successful captain was called to take command on a bigger boat.

Electronic Signals and Systems Muhammad Nasir Khan, Syed K. Hasnain, Mohsin Jamil, Ali Imran, 2022-09-01 The subject of Signals and Systems is enormously complex involving many concepts such as signals, mathematics and filter design that are woven together in an intricate manner. To cope with this scope and complexity many Signals and Systems texts are often organized around the numerical examples of a system. With such organization students can see through the complexity of Signals and Systems they can learn about the distinct concepts and protocols in one part of the communication system while seeing the big picture of how all parts fit together. From a pedagogical perspective our personal experience has been that such approach indeed works.

well Based on the Authors extensive experience of teaching and research the book is written with such a reader in mind The Book is intended for a course on signals systems at the senior undergraduate level and above The authors consider all the requirements and tools used in analysis and design of discrete time systems for filter design and signal processing Key features of the International Edition The extensive use of MATLAB based examples to illustrate how to solve the signals systems problems The textbook includes a wealth of problems with solutions Worked out examples have been included to explain new and difficult concepts and to expose the reader to real life signal processing problems The inclusion of FIR and IIR filter design further enriches the contents of the book

Spherical Inversion on $SL_n(\mathbb{R})$ Jay Jorgenson, Serge Lang, 2012-12-06 Harish Chandra's general Plancherel inversion theorem admits a much shorter presentation for spherical functions The authors have taken into account contributions by Helgason Gangolli Rosenberg and Anker from the mid 1960s to 1990 Anker's simplification of spherical inversion on the Harish Chandra Schwartz space had not yet made it into a book exposition Previous expositions have dealt with a general wide class of Lie groups This has made access to the subject difficult for outsiders who may wish to connect some aspects with several if not all other parts of mathematics and do so in specific cases of intrinsic interest The essential features of Harish Chandra theory are exhibited on $SL_n(\mathbb{R})$ but hundreds of pages of background can be replaced by short direct verifications The material becomes accessible to graduate students with especially no background in Lie groups and representation theory Spherical inversion is sufficient to deal with the heat kernel which is at the center of the authors current research The book will serve as a self contained background for parts of this research
