There is today a greater awareness that elementary mathematics is rich in important ideas and that its instruction requires far more than simply knowing the math facts and a handful of algorithms. Mathematics courses for teachers must reflect the intellectual depth and challenge of the elementary school curriculum. The Conference Board of Mathematical Sciences (CBMS) recommends that the preparation of mathematics teachers include courses that develop a deep understanding of the mathematics they teach that are designed to develop careful reasoning and common sense in analyzing conceptual relationships that develop the habits of mind of a mathematical thinker and that demonstrate flexible interactive styles of teaching. CBMS 2000 pp 7-8. Judy Sowder, Larry Sowder, and Susan Nickerson recognize and accept the challenge of presenting mathematics to teachers in a manner that addresses these recommendations. In doing so, they provide instruction that will lead teachers of mathematics to reconceptualize the mathematics they often think they already know, thus allowing them to develop a deeper understanding of the mathematics they will teach. The authors believe that teachers must know mathematics differently than most people do. Teachers need to know the mathematics they teach in a way that allows them to hold conversations about mathematical ideas and mathematical thinking with their students. A persistent pursuit of explanation is a hallmark of a classroom in which learning is taking place. A common axiom is that teachers teach the way they were taught. Prospective teachers are unlikely to demonstrate flexible interactive styles of teaching unless they have experienced mathematics taught this way. Instructors of the Reconceptualizing Mathematics courses, however, may not have experienced such instruction themselves. Thus, the authors provide many forms of instructional assistance to help instructors better understand the mathematics their prospective teachers need to know to begin to model teaching strategies that these prospective teachers will be expected to use in their own classrooms and to assist them in many ways throughout the course.

Reconceptualizing Mathematics, Manipulative Kit + Student Solutions Manual Judith Sowder, Larry Sowder, Susan Nickerson, 2010-05-19 **Student Solution Manual to Accompany: Reconceptualizing Mathematics for Elementary School Teachers** Judith T. Sowder, Larry Sowder, Susan Denise Nickerson, 2013 *Reconceptualizing Mathematics* Judith Sowder, Larry Sowder, Susan Nickerson, 2012-12-28. More and more prospective elementary teachers are being asked to develop what the Conference Board of Mathematical Sciences (CBMS) calls the habits of a mathematical thinker. This breakthrough text became the new standard for training future elementary math teachers by doing just that: helping them

absorb the ideas underlying essential math concepts rather than just working problems and memorizing facts Created from extensive math education research and class testing the book s innovative pedagogy convenient format three hole punched perforated pages wide margins and supporting technology make it the ideal text for helping today s students become tomorrow s teachers *Reconceptualizing Early Mathematics Learning* Lyn D. English,Joanne T. Mulligan,2013-05-09 This book emanated primarily from concerns that the mathematical capabilities of young children continue to receive inadequate attention in both the research and instructional arenas Research over many years has revealed that young children have sophisticated mathematical minds and a natural eagerness to engage in a range of mathematical activities As the chapters in this book attest current research is showing that young children are developing complex mathematical knowledge and abstract reasoning a good deal earlier than previously thought A range of studies in prior to school and early school settings indicate that young learners do possess cognitive capacities which with appropriately designed and implemented learning experiences can enable forms of reasoning not typically seen in the early years Although there is a large and coherent body of research on individual content domains such as counting and arithmetic there have been remarkably few studies that have attempted to describe characteristics of structural development in young students mathematics Collectively the chapters highlight the importance of providing more exciting relevant and challenging 21st century mathematics learning for our young students The chapters provide a broad scope in their topics and approaches to advancing young children s mathematical learning They incorporate studies that highlight the importance of pattern and structure across the curriculum studies that target particular content such as statistics early algebra and beginning number and studies that consider how technology and other tools can facilitate early mathematical development Reconceptualising the professional learning of teachers in promoting young children s mathematics including a consideration of the role of play is also addressed Math Instruction for Students with Learning Problems Susan Perry Gurganus,2017-02-24 Math Instruction for Students with Learning Problems Second Edition provides a research based approach to mathematics instruction designed to build confidence and competence in pre and in service PreK 12 teachers This core textbook addresses teacher and student attitudes toward mathematics as well as language issues specific mathematics disabilities prior experiences and cognitive and metacognitive factors The material is rich with opportunities for class activities and field extensions and the second edition has been fully updated to reference both NCTM and CCSSM standards throughout the text and includes an entirely new chapter on measurement and data analysis
