**Guided Discovery**

Is about...

+10

The teacher presents students with an example of a specific topic and guides students to an understanding of that topic.

**Main idea****Planning**

Prior to the lesson identify the topic, specify learning objectives, and prepare examples and non-examples. Examples should be high-quality and should contain a variety. The context for examples should also be planned in advance.

**Main idea****Implementing**

Phase 1- The teacher introduces the lesson and attempts to gain the attention of students.  
 Phase 2- The teacher shows the students examples and asks them to make observations and compare the examples.  
 Phase 3- The teacher asks more specific questions that are designed to lead students to an understanding of the concept or generalization.  
 Phase 4- The teacher guides students to a definition of the concept or a statement of the generalization. The students apply their understanding of the new context.

**Main idea****Assessment**

Formative- The teacher can assess students by listening to how they answer the questions that she asks.  
 Summative- Teachers can formally assess students by having them create examples of what they learned during the lesson.

**Main idea****Motivation**

Students get a chance to take control of their learning. They don't have to listen to a lecture, but rather form their own understanding by exploring the topic. The retention of information can be rewarding for those that normally forget everything that they hear in a lecture.

So what? What is important to understand about this?

This model will take up more time, but guided learning results in a deeper understanding than lectures and explanations.
