ORGANIZATION OF LIVING THINGS

SCIENCE IN FOCUS – BIODIVERSITY, EARLY

What Do You Understand About How Are Living Things Organized?

Living things are organized into different levels of organization. The levels of organization are: cell, tissue, organ, organ system, organism, population, community, ecosystem, and biosphere. Each level of organization has a specific function and is made up of different parts.

Cells are the basic units of life. They are made up of different parts, such as the nucleus, cytoplasm, and cell membrane. Cells work together to form tissues, which are groups of similar cells that work together to perform a specific function.

Organs are made up of different tissues that work together to perform a specific function. For example, the heart is an organ that pumps blood throughout the body. Organ systems are made up of different organs that work together to perform a specific function. For example, the digestive system is made up of the mouth, stomach, and intestines.
