Fulfilling the Sustainable Development Goals Narinder Kakar, Vesselin Popovski, Nicholas A. Robinson, 2021-08-30 This book contains assessment of the progress or the lack of it in implementing the UN Sustainable Development Goals (SDGs). Through review of the assessments and of case studies, readers can draw lessons from the actions that could work to positively address the goals. The 2030 Agenda for Sustainable Development is designed to catalyze action in critical areas of importance to humanity and the planet. The effort to implement the SDGs, however, demands a sense of urgency in the face of environmental degradation, climate change, emerging conflicts, and growing inequality among a number of other socio-economic problems. Five years after the launch of the 2030 Agenda, this book takes stock of how far the world has come and how we can position ourselves to achieve the global targets. The book is one of the first to assess how the implementation is impeded by the onset of COVID-19. It contains a special chapter on COVID-19 and the SDGs, while many thematic chapters on different SDGs also assess how COVID-19 adversely affects implementation and what measures could be taken to minimize the adverse effects. This publication thus provides a fresh look at implementation of the SDGs, highlighting impactful and creative actions that go beyond the business as usual development efforts. The volume reinforces this analysis with expert recommendations on how to support implementation efforts and achieve the SDGs through international and national strategies and the involvement of both the public and private sectors. The result is an indispensable textual tool for policy makers, academia, intergovernmental organizations (IGOs) and non-governmental organizations (NGOs) as well as the public as we march toward the 2030 deadline.

Principle of Interest Politics Puqu Wang, 2022-09-12 The book aims to build a political theory of interest politics by adopting an interest analyzing approach of Marxism to explore the dual characteristics of social interests. Based on the logical start point, the book unveils the foundations, nature, and characteristics of social political life, such as political power and political right. Then a systematic research is conducted from perspectives of political behavior, political system, and political culture, following the two logical thread lines as political power and right. Finally, the book sees the analysis of social and political development in accordance with the inter-function of political power and political rights caused by the changes and development of social interests. It is a must-read book for readers interested in the political theory and political development in China.

Throughout the volume, academic theory provides a foundation to address practical subjects, including the contract process, monitoring, and

evaluating contracts ethics and both federal and state local government contracting Contributors to this volume are both academicians and practitioners who together offer their scholarly expertise and practical experience encouraging readers to ask the very question What is the role of government in American society Through this approach students will acquire the knowledge needed to understand the various aspects of government contracting and practitioners will enhance their public procurement skills Government Contracting is ideally suited to MPA students practitioners in the public sector and elected officials looking to enhance their understanding of privatization and contracting in order to provide public services more effectively

sustainable construction materials are crucial steps toward creating environmentally friendly and low carbon buildings. However, on the one hand, the significant increase in solid construction waste has raised global environmental concerns. On the other hand, the shortage of raw materials in concrete production has triggered concern about whether they can meet the escalating demand. To address these issues, sustainable construction material is a promising direction such as recycled aggregate concrete, geopolymer concrete, limestone calcined clay cement (LC3) concrete, etc. In order to promote the application of sustainable construction materials in practical engineering, it is essential to study the structural behavior and durability of structures made with sustainable construction materials. Structural design methods can be proposed based on AI technology to improve the efficiency in the utilization of sustainable construction materials.
