- II. Signaling Molecules
 - CC types of signals

I. Intercellular Communication

A. Introduction to **Hormones**

- Greek – “to excite”
- Chemical signaling molecule responsible for regulation
- Messenger of endocrine system

Endocrine Signaling

- Secreted into body fluids, usually blood
- Binds to target cells
- All cells exposed, only those with correct receptor respond

Receptors

- Large proteins or glycoproteins on/in target cells
- Recognize and bind to **specific** hormones
- Receptors are responsible for the specificity of the endocrine system
- Continually synthesized and degraded
 - Hormone increase for long period → receptor down regulated
 - Hormone decrease for long period → receptor up-regulated
- *Way too low – make more receptors for it – maybe we can detect it*
- *Density of receptors for that hormone*

B. Types of Intercellular Communication

- Classified by:
 - Type of secreting cell – *what cell is sending the signal*
 - Route taken by signal to target cells

Endocrine Signaling

- Endocrine cells secrete hormones into extracellular fluid
 - *(through blood)*
- Diffuse into bloodstream → travel to target cells

Paracrine & Autocrine Signaling

- Cells produce and secrete local regulators (*instead of hormones*)
- Reach target cells by diffusion
- Short distance signaling, very quick
- **Paracrine:** Target cells near secreting cells (*in immediate vicinity*)
- **Autocrine:** Target is itself (*cell releases a signal and detects that same exact signal*)

Hormones and the Endocrine System Bernhard Kleine, Winfried G. Rossmanith, 2016-02-11 This book focuses on hormones and on how they are produced in very diverse regions of the body in humans and animals But hormones can be found not only in vertebrates but also in insects shellfish spiders mollusks even at the origin of metazoan diversification and exhibit the same pathways of synthesis The book addresses the different classes of hormones protein peptides hormones steroids and juvenile hormones and hormones like catecholamines thyroid hormones and melatonin It also discusses the types of hormone receptors the majority of which are heptahelical G protein coupled receptors or nuclear receptors Particular attention is paid to the organs where hormones are created with specifics on hormonal production and release while a dedicated chapter details hormonal regulation from very simple to highly complex schemes The remarkable kinetics of hormones production are also shown before the book is rounded out by chapters on evolution in the endocrine system the genetics of endocrine diseases and doping *The Endocrine System, Third Edition* Salvatore Blair, Lynette

Rushton, 2021-11-01 Much like the nervous system the endocrine system relays important communication signals throughout the body The endocrine system uses chemical signals known as hormones which are produced and stored in special glands in the body Different glands produce specialized hormones and release them into the bloodstream From there these hormones can travel directly to the tissues and organs and help regulate bodily functions In *The Endocrine System Third Edition* learn how this chemical messaging system is vital to the body's growth metabolism and sexual development Packed with full color photographs and illustrations this absorbing book provides students with sufficient background information through references websites and a bibliography **The Endocrine System** Pam Walker, Elaine Wood, 2003 Describes how the

endocrine systems works and the types of diseases and disorders **Chapter Resource 42 Hormones/Endocrine Biology** Holt Rinehart & Winston, Holt, Rinehart and Winston Staff, 2004 **Hormones** Martin Luck, 2014-07-24 Hormones play an integral part in the balance and workings of the body While many people are broadly aware of their existence there are many misconceptions and few are aware of the nature and importance of the endocrine system In this Very Short Introduction Martin Luck explains what hormones are what they do where they come from and how they work He explains how the endocrine system operates highlighting the importance of hormones in the regulation of water and salt in the body how they affect reproduction and our appetites and how they help us adjust to different environments such as travel across time zones In this fresh and modern treatment Luck also touches on the ethical and moral issues surrounding research methods testing on animals and hormone misuse ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable *Metabolic and Endocrine Physiology, Third Edition* Larry Engelking, Alan H.
