Dean, 2017-01-03 This book contains refereed papers from the 13th International Conference on GeoComputation held at the University of Texas Dallas May 20 23 2015 Since 1996 the members of the GeoComputation the art and science of solving complex spatial problems with computers community have joined together to develop a series of conferences in the United Kingdom New Zealand Australia Ireland and the United States of America The conference encourages diverse topics related to novel methodologies and technologies to enrich the future development of GeoComputation research 2015-2016 Assessment of the Army Research Laboratory National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Laboratory Assessments Board, Army Research Laboratory Technical Assessment Board, 2017-05-01 The National Academies of Sciences Engineering and Medicine s Army Research Laboratory Technical Assessment Board ARLTAB provides biennial assessments of the scientific and technical quality of the research development and analysis programs at the Army Research Laboratory ARL focusing on ballistics sciences human sciences information sciences materials sciences and mechanical sciences This biennial report summarizes the findings of the ARLTAB from the reviews conducted by the panels in 2015 and 2016 and subsumes the 2015 2016 interim report , **High Performance Computing** Julian M. Kunkel, Thomas Ludwig, 2015-06-19 This book constitutes the refereed proceedings of the 30th International Conference ISC High Performance 2015 formerly known as the International Supercomputing Conference held in Frankfurt Germany in July 2015 The 27 revised full papers presented together with 10 short papers were carefully reviewed and selected from 67 submissions The papers cover the following topics cost efficient data centers scalable applications advances in algorithms scientific libraries programming models architectures performance models and analysis automatic performance optimization parallel I O and energy efficiency **Technoscientific Research** Roman Z. Morawski, 2024-06-04 Unlike the bulk majority of publications on philosophy of science and research ethics which are authored by professional philosophers and intended for philosophers this book has been written by a research practitioner and intended for research practitioners It is distinctive by its integrative approach to methodological and ethical issues related to research practice with special emphasis of mathematical modelling and measurement as well as by attempted application of engineering design methodology to moral decision making It is also distinctive by more than 200 real world examples drawn from various domains of science and technology It is neither a philosophical treaty nor a quick reference guide It is intended to encourage young researchers especially Ph D students to deeper philosophical reflection over research practice They are not expected to have any philosophical background but encouraged to consult indicated sources of primary information and academic textbooks containing syntheses of information from primary sources This book can be a teaching aid for students attending classes aimed at identification of methodological and ethical issues related to technoscientific research followed by introduction to

David F. Treagust,Reinders Duit,Hans E. Fischer,2017-07-24 This volume is important because despite various external representations such as analogies metaphors and visualizations being commonly used by physics teachers educators and researchers the notion of using the pedagogical functions of multiple representations to support teaching and learning is still a gap in physics education The research presented in the three sections of the book is introduced by descriptions of various psychological theories that are applied in different ways for designing physics teaching and learning in classroom settings The following chapters of the book illustrate teaching and learning with respect to applying specific physics multiple representations in different levels of the education system and in different physics topics using analogies and models different modes and in reasoning and representational competence When multiple representations are used in physics for teaching the expectation is that they should be successful To ensure this is the case the implementation of representations should consider design principles for using multiple representations Investigations regarding their effect on classroom communication as well as on the learning results in all levels of schooling and for different topics of physics are reported The book is intended for physics educators and their students at universities and for physics teachers in schools to apply multiple representations in physics in a productive way Optimizing the U.S. Ground-Based Optical and Infrared Astronomy System

Geoethics S. Peppoloni,G. Di Capua ,2015-08-24 This Special Publication will be an important tool for geoscientists aimed at increasing the awareness of their societal role and responsibility in conducting education

research and practice activities What are the responsibilities of a geoscientist And what motivations are needed to push geoscientists to practice the Earth sciences in an ethical way The major environmental challenges affecting human communities require not only a strictly scientific and technical preparation by the geoscientists but also a reflection on their broader obligations towards society It is important that geoscientists consider geoethics as an indispensable framework on which to base their training and activity The principles of geoethics can guide them to pursue the common good by weighing the benefits and costs of each choice and identifying eco friendly and society friendly solutions that guarantee the respect of the right balance between human life and the dynamics of the Earth Communication and dissemination of geosciences should become core activities in building a knowledge based society which is able better to protect itself and the Earth ecosystems in order to guarantee a life in harmony with our planet for future generations

International Climate Change Law Daniel

Bodansky,Jutta Brunnée,Lavanya Rajamani,2017-06-08 This textbook by three experts in the field provides a comprehensive overview of international climate change law Climate change is one of the fundamental challenges facing the world today and is the cause of significant international concern In response states have created an international climate regime The treaties that comprise the regime the 1992 United Nations Framework Convention on Climate Change the 1997 Kyoto Protocol and the 2015 Paris Agreement establish a system of governance to address climate change and its impacts This book provides a clear analytical guide to the climate regime as well as other relevant international legal rules The book begins by locating international climate change law within the broader context of international law and international environmental law It considers the evolution of the international climate change regime and the process of law making that has led to it It examines the key provisions of the Framework Convention the Kyoto Protocol and the Paris Agreement It analyses the principles and obligations that underpin the climate regime as well as the elaborate institutional and governance architecture that has been created at successive international conferences to develop commitments and promote transparency and compliance The final two chapters address the polycentric nature of international climate change law as well as the

intersections of international climate change law with other areas of international regulation This book is an essential introduction to international climate change law for students scholars and negotiators

Climate Change and People on the Move Fanny Thornton, 2018-10-24 This book applies a justice framework to analysis of the actual and potential role of international law with respect to people on the move in the context of anthropogenic climate change That people are affected by the impacts of climate change is no longer doubted including with implications for people movement migration displacement relocation etc Climate Change and People on the Move tackles unique questions concerning international responsibility for people movement arising from the inequities inherent to climate change Corrective and distributive justice provide the analytical backbone and are explored in a substantial theoretical chapter and then applied to subsequent contextual analysis Corrective justice supports analysis as to whether people movement in the climate change context could be conceived or framed as harm loss or damage which is compensable under international law either through fault centred regimes or no fault regimes i e insurance Distributive justice supports analysis as to whether such movement could be conceived or framed as a disproportionate burden either for those faced with movement or those faced with sheltering people on the move from which duties of re distribution may stem This book contributes to the growing scholarship and analysis concerning international law or governance and people movement in response to the impacts of climate change by investigating the bounds of the law where the phenomenon is viewed as one of in justice
