THE LANCET **2000** **355**: 1001-1002

Plotting the AC input admittance Y_{in} as AC voltage V_{in}/V_{out} was an important development. With a 100-MHz, 100-V source in parallel with a 100- μ F capacitor, maximum admittance was observed about 100 Hz in the Y_{in} and Y_{out} results (green) (see Figure 10) where a low Y_{in} means there is a lower load impedance and not necessarily a more efficient amplifier because the output, V_{out} , will be lower. These results should not be strange. If V_{in}/V_{out} is 100, any value exceeding this ratio represents a potential short circuit and must be considered. If the Y_{in} plot is not calculated, instead the AC V_{in} and V_{out} signals represent their own voltage measurements.

CONCLUSIONS

Because it also doesn't have a video display (which is optional), Check expects use by people without computers, and even older adults have to work around it. "You can't find things by typing words or menu commands or fish through buttons," Check says. "All control is by touch, voice, gesture, and increasing familiarity with how to exploit the use of buttons, switches, and menu commands."
