Objective

In this lesson, you will predict how altering the environment in which a chemical reaction takes place changes the rate of the reaction and the amounts of products.

Reaction Rates

In a chemical reaction, atoms rearrange themselves by breaking and forming new bonds. The atoms of the reactants rearrange to form the products, which are made of the same atoms as the reactants. The time taken for reactants to convert to products is the reaction rate. As a reaction progresses, the amount of reactants decreases and the amount of products increases.
