Contemporary Consumer Health Informatics Nilmini Wickramasinghe, Indrit Troshani, Joseph Tan, 2016-03-21 This innovative reference examines how consumer health informatics (CHI) can transform healthcare systems stressed by staffing shortages and budget constraints and challenged by patients taking a more active role in their care. It situates CHI as vital to upgrading healthcare service delivery, detailing the relationship between health information technologies and quality healthcare and outlining what stakeholders need to learn for health IT systems to function effectively. Wide-ranging content identifies critical issues and answers key questions at the consumer, practitioner, administration, and staff levels using examples from diverse conditions, countries, technologies, and specialties. In this framework, the benefits of CHI are seen across service domains from individual patients and consumers to healthcare systems and global health entities. Included in the coverage: Use of video technology in an aged care environment; A context-aware remote health monitoring service for improved patient care; Accessibility issues in interoperable sharing of electronic health records; Physician's perspective; Managing gestational diabetes with mobile web-based reporting of glucose readings; An organizing vision perspective for developing and adopting e-health solutions; An ontology of consumer health informatics. *Contemporary Consumer Health Informatics* combines blueprint and idea book for public health and health informatics students, healthcare professionals, physicians, medical administrators, managers, and IT practitioners.

Designing for Emerging Technologies Jonathan Follett, 2014-11-07 The recent digital and mobile revolutions are a minor blip compared to the next wave of technological change as everything from robot swarms to skin-top embeddable computers and bio-printable organs start appearing in coming years. In this collection of inspiring essays, designers, engineers, and researchers discuss their approaches to experience design for groundbreaking technologies. *Design* not only provides the framework for how technology works and how it's used but also places it in a broader context that includes the total ecosystem with which it interacts and the possibility of unintended consequences. If you're a UX designer or engineer open to complexity and dissonant ideas, this book is a revelation. Contributors include Stephen Anderson, PoetPainter LLC, Lisa Caldwell, Brazen UX, Martin Charlier, Independent Design Consultant, Jeff Faneuff, Carbonite, Andy Goodman, Fjord US, Camille Goudeseune, Beckman Institute.
