Reconstructing Earth's Climate History Kristen St. John, R. Mark Leckie, Kate Pound, Megan Jones, Lawrence Krissek, 2021-06-25 Reconstructing Earth's Climate History There has never been a more critical time for students to understand the record of Earth's climate history as well as the relevance of that history to understanding Earth's present and likely future climate There also has never been a more critical time for students as well as the public at large to understand how we know as much as what we know in science This book addresses these needs by placing you the student at the center of learning In this book you will actively use inquiry based explorations of authentic scientific data to develop skills that are essential in all disciplines making observations developing and testing hypotheses reaching conclusions based on the available data recognizing and acknowledging uncertainty in scientific data and scientific conclusions and communicating your results to others The context for understanding global climate change today lies in the records of Earth's past as preserved in archives such as sediments and sedimentary rocks on land and on the seafloor as well as glacial ice corals speleothems and tree rings These archives have been studied for decades by geoscientists and paleoclimatologists Much like detectives these researchers work to reconstruct what happened in the past as well as when and how it happened based on the often incomplete and indirect records of those events preserved in these archives This book uses guided inquiry to build your knowledge of foundational concepts needed to interpret such archives Foundational concepts include interpreting the environmental meaning of sediment composition determining ages of geologic materials and events supported by a new section on radiometric dating and understanding the role of CO₂ in Earth's climate system among others Next this book provides the opportunity for you to apply your foundational knowledge to a collection of paleoclimate case studies The case studies consider long term climate trends climate cycles major and or abrupt episodes of global climate change and polar paleoclimates New sections on sea level change in the past and future climate change and life and climate change and civilization expand the book's examination of the causes and effects of Earth's climate history In using this book we hope you gain new knowledge new skills and greater confidence in making sense of the causes and consequences of climate change Our goal is that science becomes more accessible to you Enjoy the challenge and the reward of working with scientific data and results Reconstructing Earth's Climate History Second Edition is an essential purchase for geoscience students at a variety of levels studying paleoclimatology paleoceanography oceanography historical geology global change Quaternary science and Earth system science

Fossil Energy Update ,1976 **Preparing Dinosaurs** Caitlin Donahue Wylie, 2021-08-31 An investigation of the work and workers in fossil preparation labs reveals the often unacknowledged creativity and problem solving on which scientists rely Those awe inspiring dinosaur skeletons on display in museums do not spring fully assembled from the earth Technicians known as preparators have painstakingly removed the fossils from rock repaired broken bones and reconstructed missing pieces to create them These specimens are foundational evidence for paleontologists and yet the work and workers in fossil

preparation labs go largely unacknowledged in publications and specimen records In this book Caitlin Wylie investigates the skilled labor of fossil preparators and argues for a new model of science that includes all research work and workers Drawing on ethnographic observations and interviews Wylie shows that the everyday work of fossil preparation requires creativity problem solving and craft She finds that preparators privilege their own skills over technology and that scientists prefer to rely on these trusted technicians rather than new technologies Wylie examines how fossil preparators decide what fossils and therefore dinosaurs look like how labor relations between interdependent yet hierarchically unequal collaborators influence scientific practice how some museums display preparators at work behind glass as if they were another exhibit and how these workers learn their skills without formal training or scientific credentials The work of preparing specimens is a crucial component of scientific research although it leaves few written traces Wylie argues that the paleontology research community's social structure demonstrates how other sciences might incorporate non scientists into research work empowering and educating both scientists and nonscientists
