Control Grid Motion Estimation for Efficient Application of Optical Flow Christine M. Zwart, David Frakes, 2022-05-31 Motion estimation is a long standing cornerstone of image and video processing Most notably motion estimation serves as the foundation for many of today s ubiquitous video coding standards including H 264 Motion estimators also play key roles in countless other applications that serve the consumer industrial biomedical and military sectors Of the many available motion estimation techniques optical flow is widely regarded as most flexible. The flexibility offered by optical flow is particularly useful for complex registration and interpolation problems but comes at a considerable computational expense As the volume and dimensionality of data that motion estimators are applied to continue to grow that expense becomes more and more costly Control grid motion estimators based on optical flow can accomplish motion estimation with flexibility similar to pure optical flow but at a fraction of the computational expense Control grid methods also offer the added benefit of representing motion far more compactly than pure optical flow This booklet explores control grid motion estimation and provides implementations of the approach that apply to data of multiple dimensionalities Important current applications of control grid methods including registration and interpolation are also developed Table of Contents Introduction Control Grid Interpolation CGI Application of CGI to Registration Problems Application of CGI to Interpolation Problems Discussion and Conclusions Detection of Melt Ponds on Arctic Sea Ice with Optical Satellite Data Anja Rösel, 2013-05-23 The Arctic sea ice is characterized by profound changes caused by surface melting processes and the formation of melt ponds in summer Melt ponds contribute to the ice albedo feedback as they reduce the surface albedo of sea ice and hence accelerate the decay of Arctic sea ice To quantify the melting of the entire Arctic sea ice satellite based observations are necessary Due to different spectral properties of snow ice and water theoretically multi spectral optical sensors are necessary for the analysis of these distinct surface types This study demonstrates the potential of optical sensors to detect melt ponds on Arctic sea ice For the first time an Arctic wide multi annual melt pond data set for the years 2000 2011 has been created and analyzed
