Slaught, 2015-06-12 Excerpt from *Plane Geometry With Problems and Applications* In writing this book the authors have been guided by two main purposes a That pupils may gain by gradual and natural processes the power and the habit of deductive reasoning b That pupils may learn to know the essential facts of elementary geometry as properties of the space in which they live and not merely as statements in a book The important features by which the *Plane Geometry* seeks to accomplish these purposes are 1 The simplification of the first five chapters by the exclusion of many theorems found in current books These five chapters correspond to the usual five books and the most important omissions are the formal treatment of the theory of limits the incommensurable cases maxima and minima and numerous other theorems together with the deduction of complicated algebraic formul such as the area of a triangle and the radii of the inscribed escribed and circumscribed circles in terms of the three sides Chapter VI contains a graphic representation of certain important theorems and an informal presentation of incommensurable cases and limits The treatment of limits is based upon the graph since the visual or graphic method appeals more directly to the intuition than the usual abstract processes Chapter VII is devoted to advanced work and to a review of the preceding chapters About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works **Plane Geometry with Practical Problems** Marquis Joseph Newell, George Andrew
