Multidisciplinary of Environment:

1. What do you understand by "Your Environment"?

- The Social, Cultural and Physical conditions that surround, affect and influence the survival, growth and development of people, animals and plants. It includes all factors (living and nonliving) that affect an individual organism or population at any point in the life cycle; set of circumstances surrounding a particular occurrence and all the things that surrounds us.

2. Why the study of environment and the interactions is important?

- Our environment plays a critical role in the survival of several living organisms. In simple words, we can define the environment as our surroundings with several biotic and abiotic components. Thus, it is clear that environmental studies are vital for spreading awareness and finding ways to protect it. Therefore, the study of environment and the interaction is important because:

- **To understand the impacts of development:**
The development resulting in Urbanization; Industrial growth has a negative impact on the environment. With the rise in development globally, there is a great pace in the exploitation of resources. Humans have to understand the importance of the environment, which has provided the world to live freely.
- **To understand environmental problems:**
Disasters such as climate change, acid rains, floods, and tsunamis also involve human interference. They have to understand their mistakes and find the solutions to correct them and protect the environment.
- **Keep special care on ways to conserve biodiversity:**
Biodiversity serves as a backbone to maintain ecological sustainability on earth. This can be conserved by using organic foods, avoiding useless drainage of water on your property, using sustainable seafood and by Conserving our natural resources.
- **To utilize natural resources efficiently:**
Natural resources such as air, water, oil, and minerals are getting depleted day by day. Lack of management skills leads to a loss of natural resources. Every individual should learn about the importance of these resources. We should also consider appropriate action plans in our day to day lives so that we can sustain our nature and its resources effortlessly.

4. Who coined the term "Ecology"?

- Ernst Haeckel

5. Explain how different spheres of Environment interact with each other.

- The environment consists of four segments. They are:

- **Atmosphere** -It is the blanket of gases surrounding the earth.
- **Hydrosphere**- It is composed of various water bodies on the earth. It includes the oceans, lakes, rivers, etc.
- **Lithosphere** -It contains various types of soils and rocks on earth.
- **Biosphere**- It is composed of all living organisms and their interactions with the environment, viz. atmosphere, lithosphere and hydrosphere. The biosphere is the earth's zone of air, soil, and water that is capable of supporting life.

Companion to Environmental Studies Noel Castree, Mike Hulme, James D. Proctor, 2018-05-01 *Companion to Environmental Studies* presents a comprehensive and interdisciplinary overview of the key issues debates concepts approaches and questions that together define environmental studies today The intellectually wide ranging volume covers approaches in environmental science all the way through to humanistic and post natural perspectives on the biophysical world Though many academic disciplines have incorporated studying the environment as part of their curriculum only in recent years has it become central to the social sciences and humanities rather than mainly the geosciences The environment is now a keyword in everything from fisheries science to international relations to philosophical ethics to cultural studies The Companion brings these subject areas and their distinctive perspectives and contributions together in one accessible volume Over 150 short chapters written by leading international experts provide concise authoritative and easy to use summaries of all the major and emerging topics dominating the field while the seven part introductions situate and provide context for section entries A gateway to deeper understanding is provided via further reading and links to online resources *Companion to Environmental Studies* offers an essential one stop reference to university students academics policy makers and others keenly interested in the environmental question the answer to which will define the coming century [Environmental Science](#) William P. Cunningham, Barbara Woodworth Saigo, 1999 Introducing students to environmental science without any prerequisites this text has a strong global emphasis and recognizes that the world is a unified biosphere that doesn't adhere to artificial political boundaries Topics covered include the Greenhouse Effect the Clean Air Act and El Niño **Mining and the Environment** Karlheinz Spitz, John Trudinger, 2019-08-20 The history of mining is replete with controversy of which much is related to environmental damage and consequent community outrage Over recent decades this has led to increased pressure to improve the environmental and social performance of mining operations particularly in developing countries The industry has responded by embracing the ideals of sustainability and corporate social responsibility *Mining and the Environment* identifies and discusses the wide range of social and environmental issues pertaining to mining with particular reference to mining in developing countries from where many of the project examples and case studies have been selected Following an introductory overview of pressing issues the book illustrates how environmental and social impact assessment such as defined in The Equator Principles integrates with the mining lifecycle and how environmental and social management aims to eliminate the negative and accentuate the positive mining impacts Practical approaches are provided for managing issues ranging from land acquisition and resettlement of Indigenous peoples to the technical aspects of acid rock drainage and mine waste management Moreover thorough analyses of ways and means of sharing non transitory mining benefits with host communities are presented to allow mining to provide sustainable benefits for the affected communities This second edition of *Mining and the Environment* includes new chapters on Health Impact Assessment Biodiversity and

Gender Issues all of which have become more important since the first edition appeared a decade ago The wide coverage of issues and the many real life case studies make this practice oriented book a reference and key reading It is intended for environmental consultants engineers regulators and operators in the field and for students to use as a course textbook As much of the matter applies to the extractive industries as a whole it will also serve environmental professionals in the oil and gas industries Karlheinz Spitz and John Trudinger both have multiple years of experience in the assessment of mining projects around the world The combination of their expertise and knowledge about social economic and environmental performance of mining and mine waste management has resulted in this in depth coverage of the requirements for responsible and sustainable mining

Portuguese Literature and the Environment Victor K. Mendes, Patrícia Vieira, 2019-06-03 Portuguese Literature and the Environment explores the relationship between Portuguese literature and the environment from Medieval times to the present From the centrality of nature in Medieval poetry through the bucolic verse of the Renaissance all the way to the Romantic and post Romantic nostalgia for a pristine natural or rural landscape under threat in the wake of industrialization Portuguese literature has frequently reflected on the connection between humans and the natural world More recently the postcolonial turn in contemporary literature has highlighted the contrast between the environment of the former colonies and that of Portugal Contributors to the collection examine how Portuguese writers engage with the environment and have incorporated nature in their texts not only to prompt social political or philosophical reflections on human society but also as a way to learn from non humans The book is organized into three sections The first explores the relationship between Portuguese philosophy historiography culture and environmental issues The second section discusses the link between literary texts and the environment from the Renaissance to 1900 The final section analyzes the connection between literary movements or specific authors and environmental change from 1900 to today Scholars of literature Latin American studies literature and environmental studies will find this volume especially useful

Environment Evolution and Values D.P. Chattopadhyaya, 2007 This book is mainly concerned with environment evolution and values terms which figure in its very title The basic underlying concepts of evolution are natural environment highlighted by Lamarck 1744 1829 Heredity and natural selection emphasised by Darwin 1809 1882 and genetic mutation first developed by Mendel 1822 1884 Though these three great life scientists brought to light three main components of biological evolution these were known and formulated by others for a long time Nature is ordinarily believed to be a world of facts governed by law of causality and values are said to be rooted in human freedom The author of this book has paid special attention to the so called value fact dualism with special reference to changing theories of evolution and an attempt has been made to show that the supposed dualism is untenable This book will be of interest to philosophers life scientists and social scientists It will be of interest also to the general readers

Plato Robin Barrow, 2014-10-23 Plato was the first and most formidable thinker to recognise that education is a fiercely contested concept and to point out what great social and personal

issues are at stake in education He articulated a compelling argument for a liberal arts education as something peculiarly befitting free and autonomous beings He understood the centrality of education for human well being and flourishing And he was the first to set forth a systematic theory of education In this text Robin Barrow concisely and convincingly establishes the continuing relevance of Plato s views to debates on such issues as nature vs nurture or genetic inheritance vs social background philosophy vs sophistry or the pursuit of true understanding vs the pursuit of reputation or perhaps simply truth vs politics and the media Questions concerning the fair distribution of education moral education value judgments and human nature are explored along with themes more specifically associated with Plato s philosophy such as the Theory of Ideas The whole is embedded in a clearly presented account of the historical background to Plato s thought

The Nature of Environmental Stewardship Johnny Wei-Bing Lin,2016-02-08 Environmental issues appear deceptively simple science tells us what the problems are and how to solve them and for Christians the Bible motivates us to care for creation And yet both in society in general as well as in the Christian church in particular we cannot seem to agree on what to do regarding environmental issues In this book climate scientist Johnny Wei Bing Lin argues that determining the content of environmental stewardship far from being a straightforward exercise is a difficult and complex endeavor He sets forth a general taxonomy drawing from worldviews ethical theories science epistemology science policy studies politics and economics that can help us better understand what excellent creation care consists of and how to bridge the differences people have regarding environmental issues

Choosing Our Environment United States. Congress. Senate. Committee on Public Works. Panel on Environmental Science and Technology,1976 *Science-Based Lawmaking* Dionysia-Theodora Avgerinopoulou,2019-08-31 The Book takes the approach of a critique of the prevailing international environmental law making processes and their systemic shortcomings It aims to partly redesign the current international environmental law making system in order to promote further legislation and more effectively protect the natural environment and public health Through case studies and doctrinal analyses an array of initial questions guides the reader through a variety of factors influencing the development of International Environmental Law After a historical analysis commencing from the Platonic philosophy up to present the Book holds that some of the most decisive factors that could create an optimized law making framework include among others progressive voting processes science based secondary international environmental legislation new procedural rules that enhance the participation in the law making process by both experts and the public and also review the implementation compliance and validity of the science base of the laws The international community should develop new law making procedures that include expert opinion Current scientific uncertainties can be resolved either by policy choices or by referring to the so called sound science In formulating a new framework for environmental lawmaking processes it is essential to re shape the rules of procedure so that experts have greater participation in those in order to improve the quality of International Environmental Law faster than the traditional processes that mainly embrace political

priorities generated by the States Science serves as one of the main tools that will create the next generation of International Environmental Law and help the world transition to a smart inclusive sustainable future

[The 'Ecosystem Approach' in International Environmental Law](#) Vito De Lucia,2019-03-28 The ecosystem approach broadly understood as a legal and governance strategy for integrated environmental and biodiversity management has been adopted within a wide variety of international environmental legal regimes and provides a narrative a policy approach and in some cases legally binding obligations for States to implement what has been called a new paradigm of environmental management In this last respect the ecosystem approach is also often considered to offer an opportunity to move beyond the outdated anthropocentric framework underpinning much of international environmental law thus helping re think law in the Anthropocene Against this background this book addresses the question of whether the ecosystem approach represents a paradigm shift in international environmental law and governance or whether it is in conceptual and operative continuity with legal modernity This central

question is explored through a combined genealogical and biopolitical framework which reveals how the ecosystem approach is the result of multiple contingencies and contestations and of the interplay of divergent and sometimes irreconcilable ideological projects. The ecosystem approach this book shows does not have a univocal identity and must be understood as both signalling the potential for a decisive shift in the philosophical orientation of law and the operationalisation of a biopolitical framework of control that is in continuity with and even intensifies the eco-destructive tendencies of legal modernity. It is however in revealing this disjunction that the book opens up the possibility of moving beyond the already tired assessment of environmental law through the binary of anthropocentrism and ecocentrism.

The Reciprocity of Perceiver and Environment Thomas J. Lombardo, 2017-03-27 Originally published in 1987 this title intended to historically reveal through tracing Gibson's development the substance of his views and how they bore upon general philosophical issues in theories of knowledge and to investigate in detail the historical context of Gibson's theoretical position within psychology. Though the author has included a history of Gibson's perceptual research and experimentation the focus is to explicate the dynamic abstract form of Gibson's ecological approach. His emphasis is philosophical and theoretical attempting to bring out the direction Gibson was moving in and how such changes could restructure the theoretical fabric of psychology. He devotes considerable attention to the Greeks, Medievalists and the founders of the Scientific Revolution. This is because Gibson's theoretical challenge runs deep into the structure of western thought. The author's central goal was to set Gibson's ecological theory within the historical context of fundamental philosophical/scientific issues.

The Reason of Things A.C. Grayling, 2010-12-09 The follow up to *THE MEANING OF THINGS* which continues A.C. Grayling's philosophical journey through life. The most important question we can ask ourselves is what kind of life is the best. This is the same as asking: How does one give meaning to one's life? How can one justify one's existence and make it worthwhile? How does one make experience valuable and keep growing and learning in the process and through this learning acquire a degree of understanding of oneself and the world? A civilised society is one which never ceases debating with itself about what human life should best be. Some would with justice say that if we want ours to be such a society we must all contribute to that discussion. This book is with appropriate diffidence such a contribution. It consists of a collection of Grayling's regular Last Word columns in the Guardian. This time topics include: Suicide, Deceit, Luxury, Profit, Marriage, Meat eating, Liberty, Slavery, Protest, Guns and War.

The Environment William P. Kabasenche, Michael O'Rourke, Matthew H. Slater, 2012-04-27 Original essays by leading scholars consider the environment from biological and ethical perspectives. Philosophical reflections on the environment began with early philosophers' invocation of a cosmology that mixed natural and supernatural phenomena. Today the central philosophical problem posed by the environment involves not what it can teach us about ourselves and our place in the cosmic order but rather how we can understand its workings in order to make better decisions about our own conduct regarding it. The resulting inquiry spans different areas of contemporary philosophy many of which are represented by the

fifteen original essays in this volume The contributors first consider conceptual problems generated by rapid advances in biology and ecology examining such topics as ecological communities adaptation and scientific consensus The contributors then turn to epistemic and axiological issues first considering philosophical aspects of environmental decision making and then assessing particular environmental policies largely relating to climate change including reparations remediation and nuclear power from a normative perspective Contributors Katie McShane Robert Brandon Rachel Bryant Michael Trestman Brian Steverson Denis Walsh Lorraine Code Jay Odenbaugh Joseph Cannon Mariam Thalos Chrisoula Andreou Clare Palmer Ben Hale Kristin Shrader Frechette Andrew Light
