Linear and Nonlinear Programming David G. Luenberger, Yinyu Ye, 2015-06-25 This new edition covers the central concepts of practical optimization techniques with an emphasis on methods that are both state of the art and popular One major insight is the connection between the purely analytical character of an optimization problem and the behavior of algorithms used to solve a problem This was a major theme of the first edition of this book and the fourth edition expands and further illustrates this relationship As in the earlier editions the material in this fourth edition is organized into three separate parts Part I is a self contained introduction to linear programming The presentation in this part is fairly conventional covering the main elements of the underlying theory of linear programming many of the most effective numerical algorithms and many of its important special applications Part II which is independent of Part I covers the theory of unconstrained optimization including both derivations of the appropriate optimality conditions and an introduction to basic algorithms This part of the book explores the general properties of algorithms and defines various notions of convergence Part III extends the concepts developed in the second part to constrained optimization problems Except for a few isolated sections this part is also independent of Part I It is possible to go directly into Parts II and III omitting Part I and in fact the book has been used in this way in many universities New to this edition is a chapter devoted to Conic Linear Programming a powerful generalization of Linear Programming Indeed many conic structures are possible and useful in a variety of applications It must be recognized however that conic linear programming is an advanced topic requiring special study Another important topic is an accelerated steepest descent method that exhibits superior convergence properties and for this reason has become quite popular The proof of the convergence property for both standard and accelerated steepest descent methods are presented in Chapter 8 As in previous editions end of chapter exercises appear for all chapters From the reviews of the Third Edition this very well written book is a classic textbook in Optimization It should be present in the bookcase of each student researcher and specialist from the host of disciplines from which practical optimization applications are drawn Jean Jacques Strodiot Zentralblatt MATH Vol 1207 2011

Multicriterion Decision in Management Jean-Charles Pomerol, Sergio Barba-Romero, 2012-12-06 Multicriterion Decision in Management Principles and Practice is the first multicriterion analysis book devoted exclusively to discrete multicriterion decision making Typically multicriterion analysis is used in two distinct frameworks Firstly there is multiple criteria linear programming which is an extension of the results of linear programming and its associated algorithms Secondly there is discrete multicriterion decision making which is concerned with choices among a finite number of possible alternatives such as projects investments decisions etc This is the focus of this book The book concentrates on the basic principles in the domain of discrete multicriterion analysis and examines each of these principles in terms of their properties and their implications In multicriterion decision analysis any

optimum in the strict sense of the term does not exist Rather multicriterion decision making utilizes tools methods and thinking to examine several solutions each having their advantages and disadvantages depending on one s point of view Actually various methods exist for reaching a good choice in a multicriterion setting and even a complete ranking of the alternatives The book describes and compares these methods so called aggregation methods with their advantages and their shortcomings Clearly organizations are becoming more complex and it is becoming harder and harder to disregard complexity of points of view motivations and objectives The day of the single objective profit social environment etc is over and the wishes of all those involved in all their diversity must be taken into account To do this a basic knowledge of multicriterion decision analysis is necessary The objective of this book is to supply that knowledge and enable it to be applied The book is intended for use by practitioners managers consultants researchers and students in engineering and business

Handbook of Multivalued Analysis Shouchuan Hu,Nikolaos S. Papageorgiou,2013-11-21 In volume I we developed the tools of Multivalued Analysis In this volume we examine the applications After all the initial impetus for the development of the theory of set valued functions came from its applications in areas such as control theory and mathematical economics In fact the needs of control theory in particular the study of systems with a priori feedback led to the systematic investigation of differential equations with a multi valued vector field differential inclusions For this reason we start this volume with three chapters devoted to set valued differential equations However in contrast to the existing books on the subject i e J P Aubin A Cellina *Differential Inclusions* Springer Verlag 1983 and Deimling *Multivalued Differential Equations* W De Gruyter 1992 here we focus on Evolution Inclusions which are evolution equations with multi valued terms Evolution equations were raised to prominence with the development of the linear semigroup theory by Hille and Yosida initially with subsequent important contributions by Kato Phillips and Lions This theory allowed a successful unified treatment of some apparently different classes of nonstationary linear partial differential equations and linear functional equations The needs of dealing with applied problems and the natural tendency to extend the linear theory to the nonlinear case led to the development of the nonlinear semigroup theory which became a very effective tool in the analysis of broad classes of nonlinear evolution equations

Remote Sensing in Archaeology James R. Wiseman, Farouk

El-Baz, 2007-06-04 Over the last few decades a revolution took place in our ability to observe and explore our home planet using spaceborne and airborne remote sensing instruments This revolution resulted from the new capability of observing on a large regional and global scale surface patterns and features and from using multispectral instruments to observe surface signatures not visible to the human eye and to penetrate below the surface cover using microwave radiation Over the last decade this new technology is being brought to bear in the field of archaeology As nicely and comprehensively described in this book remote sensing techniques are bringing new powerful tools to help archaeologists in their quest of discovery and exploration Even though this field is still in its infancy the different articles in this book give us a glimpse of the things to come and the great potential of remote sensing in archaeology The editors have brought an excellent sampling of authors that illustrate how remote sensing techniques are being used in the real world of archaeological exploration A number of chapters illustrate how spaceborne and airborne remote sensing instruments are being used to decipher surface morphological features in arid Egypt Arabia semi arid Greece Ethiopia Italy as well as tropical regions Costa Rica Guatemala Cambodia to help in archaeological and paleontological exploration They illustrate the use of surface cover penetration with radars high resolution multispectral imaging on a regional basis as well as topographic signatures acquired with spaceborne and airborne sensors
