Younis Khan,Zhibo Zhang,2024-06-03 With the soaring growth of global population and socioeconomy energy consumption and demand has been rapidly rising and coal would still remain a fundamental energy source for a long time into the future Seeking deep coal resources becomes an inevitable trend due to the depletion of shallow coal resources Deep mining of coal resources promotes socioeconomic development whereas bringing a variety of security challenges In deep underground there is a significant risk increase in coal and rock dynamic disasters CRDDs owing to the changes in physical and mechanical properties of coal and rock In this regard it is of great importance and necessity to prevent and control CRDDs effectively and efficiently As typical natural geological materials coal and rock have evident inhomogeneity and anisotropy and manifest

differences in strength deformation permeability and other mechanical characteristics due to their various mineral compositions porosity and weak structural plane Considering the complexity of coal and rock it is essential to carry out laboratory experiments on macroscopic mechanical responses and microscopic fracture characteristics to identify precursor information and reveal evolution mechanisms of dynamic disasters Yet by far less is known about the combined physical and numerical simulation on multi scale CRDDs which hinders the development of corresponding prevention and control technologies This Research Topic aims to initiate a global scientific and technological discussion on the cutting edge advances of physical and numerical simulation in monitoring early warning and prevention of CRDDs We welcome Original Research and Review articles addressing the following themes that include but are not limited to Physical and numerical simulation on mechanisms of CRDDs Numerical simulation on prediction of CRDDs Numerical simulation on prevention and control of CRDDs collapse
