

## Understanding the Costs Involved in Mutual Fund Investments

Bob is debating purchasing a mutual fund, but he has some questions for his financial advisor, Cho. The following table presents information on four different open-end mutual funds that Bob and Cho are discussing. Use the information in the table to answer the questions that follow.

FUND	MAR	NET OMIC	YTD % RET
MF1	12.23	-0.06	2.4
MF2	13.77	0.06	3.5
MF3	29.81	0.20	8.0
MF4	43.21	0.20	9.1

**Bob:** After some research, I've narrowed it down to these four funds. But can you explain to me the relationship between 12b-1 fees and fund performance?

**Cho:** Generally, funds that charge 12b-1 fees, such as MF1, do not necessarily **outperform** funds that do not charge these fees.

**Bob:** What about front-end load fees? For example, assume MF2 has a front-end load fee of 8%, when do I pay this fee?

**Cho:** If you purchase 100 shares of this fund at the NAV, you will pay a commission of **[ ]**, but when you sell these shares you will pay **[ ]** in front-end fees.

**Bob:** It sounds like these fees could start to add up. What's the most I can expect to pay in fees?

**Cho:** If a fund charges a 4% front-end load and a 4% 12b-1 fee, then it can charge a maximum of only **[ ]**% in back-end load charges without violating the cap.

**Bob:** Thank you very much! It sounds like you'd recommend looking for **[ ]** funds whenever possible.

The volume covers a wide range of topics including multiplicative ideal theory, Dedekind Prfer Krull and Mori rings, non commutative rings and algebras, rings of integer valued polynomials, topological aspects in ring theory, factorization theory in rings and semigroups, and direct sum decomposition of modules. The conference also featured two special sessions dedicated to Matej Brešar and Sophie Frisch on the occasion of their 60th birthdays. This volume is aimed at graduate students and researchers in these areas as well as related fields and provides new insights into both classical and contemporary research in ring and factorization theory.

**Particle Physics and the Universe** Josip Trampetic, Julius Wess, 2006-01-25 The Adriatic Meetings have traditionally been conferences on the most advanced status of science. They are one of the very few conferences in physics aiming at a very broad participation of young and experienced researchers with different backgrounds in particle physics. Particle physics has grown into a highly multi faceted discipline over the sixty years of its existence mainly because of two reasons. Particle physics as an experimental science is in need of large scale laboratory set ups involving typically collaborations of several hundreds or even thousands of researchers and technicians with the most diverse expertise. This forces particle physics being one of the most fundamental disciplines of physics to maintain a constant interchange and contact with other disciplines notably solid state physics and laser physics, cosmology and astrophysics, mathematical physics and mathematics. Since the expertise necessary in doing research in particle physics has become tremendously demanding in the last years the field tends to organize purely expert conferences, meetings and summer schools such as for detector development for astroparticle physics or for string theory.

The Adriatic Meeting throughout its history has been a place for establishing exchange between theory and experiment. The 9th Adriatic Meeting successfully continued this tradition and even intensified the cross discipline communication by establishing new contacts between the community of cosmologists and of particle physicists. The exchange between theorists and experimentalists was impressively intensive and will certainly have a lasting effect on several research projects of the European and world wide physics community.
