Communicating Process Architectures 2000 World Occam and Transputer User Group. Technical Meeting, 2000 Modern computing systems are built in terms of components and those components communicating Communication systems imply concurrency which is a theme of the WoTUG series Traditionally concurrency has been taught considered and experienced as an advanced and difficult topic The thesis underlying this conference is that that idea is wrong The natural world operates through continuous interaction of massive numbers of autonomous agents at all levels sub atomic human astronomic It seems it is time to mature concurrency into a core engineering discipline that can be used on an everyday basis to simplify problem solutions as well as to enable them The goal of Communicating Process Architectures 2000 was to stimulate discussion and ideas as to the role concurrency should play in future generations of scalable computer infrastructure and applications where scaling means the ability to ramp up functionality stay in control as complexity increases as well as physical metrics such as performance

Handbook of Vacuum Science and Technology Dorothy Hoffman, Bawa Singh, John H. Thomas III, 1997-10-29 The Handbook of Vacuum Technology consists of the latest innovations in vacuum science and technology with a strong orientation towards the vacuum practitioner. It covers many of the new vacuum pumps, materials, equipment and applications. It also details the design and maintenance of modern vacuum systems. The authors are well-known experts in their individual fields with the emphasis on performance, limitations and applications rather than theory. There are many useful tables, charts and figures that will be of use to the practitioner. User-oriented with many useful tables, charts and figures of use to the practitioner. Reviews new vacuum materials and equipment. Illustrates the design and maintenance of modern vacuum systems. Includes well-referenced chapters.

A User's Guide to the Meade LXD55 and LXD75 Telescopes Martin Peston, 2010-04-28 I have owned telescopes for over 25 years since I was a young lad. I purchased an LXD55 AR 6 Refractor in 2002 and was one of the first to own one in the UK. I am also a proud owner of an LXD75 SC 8. Armed with these two very different telescopes, I have spent many hours searching the skies for interesting objects using Meade's Autostar Goto facility. My motivation to write a book about the LXD Goto telescope series first came from comments about an LXD55 AR 6 Refractor review that was published on the LXD55.com website. From then on, I have had regular emails from people asking technical questions about the telescope and which model is best suited for them. Whilst attending Star parties in the UK, I found that many LXD owners would struggle to use them even at a basic level, especially if they have never owned or used an equatorially mounted Goto telescope before. Since the first LXD55 models came out in early 2002, owners have struggled to find useful information to help them use the telescopes to the best advantage. There have been mixed reactions about its quality and performance. Hence, this book is directed towards those who are new to Goto and the LXD telescope.

Energy: a Continuing Bibliography with Indexes, 1981 **Technical Abstract Bulletin**, 1980 Monthly Catalogue, United States Public Documents, 1985 **Applications in Electronics Pervading Industry, Environment and Society** Sergio Saponara, Alessandro De Gloria, Francesco Bellotti, 2021-06-04 This book features the manuscripts accepted for the Special Issue Applications in Electronics Pervading Industry, Environment and Society Sensing Systems and Pervasive Intelligence of the MDPI journal Sensors. Most of the papers come from a selection of the best papers of the 2019 edition of the Applications in Electronics Pervading Industry, Environment and Society APPLEPIES Conference which was held in November 2019. All these papers have been significantly enhanced with novel experimental results. The papers give an overview of the trends in research and development activities concerning the pervasive application of electronics in industry, the environment and society. The focus of these papers is on cyber-physical systems (CPS) with research proposals for new sensor acquisition and ADC, analog to digital converter methods, high-speed communication systems, cybersecurity, big data management and data processing, including emerging machine learning techniques. Physical implementation aspects are discussed as well as the trade-off found between functional performance and hardware system costs.
