Reliability of Geotechnical Structures in ISO2394

K.K. Phoon, J.V. Retief, 2016-11-25 The latest 4th edition of the international standard on the principles of reliability for load bearing structures ISO2394 2015 includes a new Annex D dedicated to the reliability of geotechnical structures The emphasis in Annex D is to identify and characterize critical elements of the geotechnical reliability based design process This book contains a wealth of data and information to assist geotechnical engineers with the implementation of semi probabilistic or full probabilistic design approaches within the context of established geotechnical knowledge principles and experience The introduction to the book presents an overview on how reliability can play a complementary role within prevailing norms in geotechnical practice to address situations where some measured data and or past experience exist for limited site specific data to be supplemented by both objective regional data and subjective judgment derived from comparable sites elsewhere The principles of reliability as presented in ISO2394 2015 provides the common basis for harmonization of structural and geotechnical design The balance of the chapters describes the uncertainty representation of geotechnical design parameters the statistical characterization of multivariate geotechnical data and model factors semi probabilistic and direct probability

based design methods in accordance to the outline of Annex D This book elaborates and reinforces the goal of Annex D to advance geotechnical reliability based design with geotechnical needs at the forefront while complying with the general principles of reliability given by ISO2394 2015 It serves as a supplementary reference to Annex D and it is a must read for designing geotechnical structures in compliance with ISO2394 2015 **Cone Penetration Testing 2022** Guido

Design Chong Tang,Kok-Kwang Phoon,2021-03-16 Model Uncertainties in Foundation Design is unique in the compilation of the largest and the most diverse load test databases to date covering many foundation types shallow foundations spudcans driven piles drilled shafts rock sockets and helical piles and a wide range of ground conditions soil to soft rock All databases with names prefixed by NUS are available upon request This book presents a comprehensive evaluation of the model factor mean bias and coefficient of variation COV for ultimate and serviceability limit state based on these databases These statistics can be used directly for AASHTO LRFD calibration Besides load test databases performance databases for other geo structures and their model factor statistics are provided Based on this extensive literature survey a practical three tier scheme for classifying the model uncertainty of geo structures according to the model factor mean and COV is proposed This empirically grounded scheme can underpin the calibration of resistance factors as a function of the degree of understanding a concept already adopted in the Canadian Highway Bridge Design Code and being considered for the new draft for Eurocode 7 Part 1 EN 1997 1 202x The helical pile research in Chapter 7 was recognised by the 2020 ASCE Norman Medal

Landslides in Sensitive Clays Vikas Thakur,Jean-Sébastien L'Heureux,Ariane Locat,2017-05-23 This book gathers the most recent scientific research on the geological geotechnical and geophysical aspects of slope failure in sensitive clays Gathering contributions by international experts it focuses on understanding the complete and practical spectrum of challenges presented by landslides in such complex materials Based on sound and validated research results the book also

presents several recommendations that could be implemented in the guidelines or code of practice. These recommendations cover topics including the characterization and behavior of sensitive clays, the pre failure, failure and post failure stages of sensitive clays, mapping and identification methods, climate change hazard assessment and risk management. Sensitive clays are known for their potential for causing large landslides which pose a serious risk to human lives, infrastructure and surrounding ecosystems within their reach. This has been demonstrated by the recent catastrophic landslides in e.g. S rum 2016, Skjeggstad 2015, Statland 2014, Byneset 2012, St Jude 2010, Lyngen 2010 and Kattmarka 2009. The 2015 collapse of the Skjeggstad Bridge in Norway which was due to a landslide in sensitive clay alone costs millions of dollars in repairs. Recently efforts are being made to increase society's ability to cope with such landslide hazards. Geoscientists are now expected to provide input to the agencies responsible for landslide risk preparedness. In other words, geoscientists' role is not only to act as technologists to establish new theories but also to go the extra mile to implement them in practice so as to find meaningful solutions to geotechnical problems.

Databases for Data-Centric Geotechnics Kok-Kwang Phoon, Chong Tang, 2024-12-20. Databases for Data Centric Geotechnics forms a definitive reference and guide to databases in geotechnical and rock engineering to enhance decision making in geotechnical practice using data driven methods. This first volume pertains to site characterization. The opening chapter presents an in depth analysis of site data attributes including the establishment of a new taxonomy of site data under 4S site generalizations: spatial features, sampling characteristics and smart data to provide a novel agenda for data driven site characterization. Type 3 machine learning methods, disruptive value are possible as sensors become more pervasive and more intelligent. A comprehensive overview of site characterization information is also presented with a focus on its availability, coverage, value to decision making and challenges. The remaining 13 chapters cover databases of soil and rock properties and the application of these databases to rock socket behavior, rock classification, settlement on soft marine clays, permeability of fine grained soils and liquefaction among others. The databases were compiled from studies undertaken in many countries including Austria, Australia, Brazil, Canada, China, France, Finland, Germany, India, Iran, Japan, Korea, Malaysia, Mexico, New Zealand, Norway, Singapore, Sweden, Thailand, the United Kingdom and the United States. This volume on site characterization is a companion to the volume on geotechnical structures. Databases for Data Centric Geotechnics represents the most diverse and comprehensive assembly of database research in a single publication consisting of two volumes to date. It follows from Model Uncertainties for Foundation Design also published by CRC Press and suits specialist geotechnical engineers, researchers and graduate students.
