(1)

(b) Parkinson's disease affects neurones in the brain that are responsible for movement.

Using the information in Fig. 3.1 and Fig. 3.2 compare and explain the effect of Parkinson's disease on a person's movement.

- Parkinson's patient has fewer vesicles [1 mark]
 fewer neurotransmitters inside the vesicles [1 mark]
 and fewer neurotransmitters are released [1 mark]
- fewer impulses in the post-synaptic neurone [1 mark]

Undisciplining Knowledge Harvey J. Graff, 2015-08-01 The first critical history of interdisciplinary efforts and movements in the modern university Interdisciplinarity or the interrelationships among distinct fields disciplines or branches of knowledge in pursuit of new answers to pressing problems is one of the most contested topics in higher education today Some see it as a way to break down the silos of academic departments and foster creative interchange while others view it as a destructive force that will diminish academic quality and destroy the university as we know it In *Undisciplining Knowledge* acclaimed scholar Harvey J Graff presents readers with the first comparative and critical history of interdisciplinary initiatives in the modern university Arranged chronologically the book tells the engaging story of how various academic fields both embraced and fought off efforts to share knowledge with other scholars It is a story of myths exaggerations and misunderstandings on all sides Touching on a wide variety of disciplines including genetic biology sociology the humanities communications social relations operations research cognitive science materials science nanotechnology cultural studies literacy studies and biosciences the book examines the ideals theories and practices of interdisciplinarity through comparative case studies Graff interweaves this narrative with a social institutional and intellectual history of interdisciplinary efforts over the 140 years of the modern university focusing on both its implementation and evolution while exploring substantial differences in definitions goals institutional locations and modes of organization across different areas of focus Scholars across the disciplines specialists in higher education administrators and interested readers will find the book s multiple perspectives and practical advice on building and operating and avoiding fallacies and errors in interdisciplinary research and education invaluable

Reversible Ubiquitylation in Plant Biology Hongyong Fu, Daphne Goring, Pascal Genschik, 2015-03-26 Reversible ubiquitylation plays an important regulatory role in

almost all aspects of cellular and organismal processes in plants Its pervasive regulatory role in plant biology is primarily due to the involvement of a large set of ubiquitin system constituents encoded by approximately 6% Arabidopsis genome the huge number of important cellular proteins targeted as substrates and various drastic effects on the modified proteins The major components of the ubiquitin system include a large set of enzymes and proteins involved in ubiquitin conjugation E1s E2s and E3s and deconjugation deubiquitinases of different classes and post ubiquitin conjugation components such as ubiquitin receptors endocytic machineries and 26S proteasome The established substrates include transcriptional activators and repressors signaling components key metabolic enzymes and critical mechanistic components of major cellular processes and regulatory mechanisms Post translational modification of proteins by reversible ubiquitylation could drastically affects the modified proteins by proteolytic processing and turnover altering catalytic activity subcellular targeting and protein protein interaction Continued efforts are being carried out to identify novel substrates critical for various cellular and organismal processes to determine effects of reversible ubiquitylation on the modified substrates to determine signaling determinants triggering reversible ubiquitylation of specific substrates to illustrate individual components of the ubiquitin system for their in vivo functions and involved mechanistic roles and to determine mechanistic roles of modification acting on critical components of major cellular processes and regulatory mechanisms The aim of this special topic is to serve as a platform to report most recent advances on those above listed current research endeavors We welcome article types including original research review mini review method and perspective opinion hypothesis

Biochar for Environmental Management

Johannes Lehmann, Stephen Joseph, 2015-02-20 Biochar is the carbon rich product which occurs when biomass such as wood manure or crop residues is heated in a closed container with little or no available air It can be used to improve agriculture and the environment in several ways and its persistence in soil and nutrient retention properties make it an ideal soil amendment to increase crop yields In addition to this biochar sequestration in combination with sustainable biomass production can be carbon negative and therefore used to actively remove carbon dioxide from the atmosphere with potentially major implications for mitigation of climate change Biochar production can also be combined with bioenergy production through the use of the gases that are given off in the pyrolysis process The first edition of this book published in 2009 was the definitive work reviewing the expanding research literature on this topic Since then the rate of research activity has increased at least ten fold and biochar products are now commercially available as soil amendments This second edition includes not only substantially updated chapters but also additional chapters on environmental risk assessment on new uses of biochar in composting and potting mixes a new and controversial field of studying the effects of biochar on soil carbon cycles on traditional use with very recent discoveries that biochar was used not only in the Amazon but also in Africa and Asia on changes in water availability and soil water dynamics and on sustainability and certification The book therefore continues to represent the most comprehensive compilation of current knowledge on all aspects of biochar

Immune system modeling and analysis Ramit Mehr,Miles Davenport,2015-04-22 The rapid development of new methods for immunological data collection from multicolor flow cytometry through single cell imaging to deep sequencing presents us now for the first time with the ability to analyze and compare large amounts of immunological data in health aging and disease The exponential growth of these datasets however challenges the theoretical immunology community to develop methods for data organization and analysis Furthermore the need to test hypotheses regarding immune function and generate predictions regarding the outcomes of medical interventions necessitates the development of mathematical and computational models covering processes on multiple scales from the genetic and molecular to the cellular and system scales The last few decades have seen the development of methods for presentation and analysis of clonal repertoires those of T and B lymphocytes and phenotypic surface marker based repertoires of all lymphocyte types and for modeling the intricate network of molecular and cellular interactions within the immune systems This e Book which has first appeared as a Frontiers in Immunology research topic provides a comprehensive online open access snapshot of the current state of the art on immune system modeling and analysis

The Runes of Evolution Simon Conway Morris, 2015-06-30 How did human beings acquire imaginations that can conjure up untrue possibilities How did the Universe become self aware In *The Runes of Evolution* Simon Conway Morris revitalizes the study of evolution from the perspective of convergence providing us with compelling new evidence to support the mounting scientific view that the history of life is far more predictable than once thought A leading evolutionary biologist at the University of Cambridge Conway Morris came into international prominence for his work on the Cambrian explosion especially fossils of the Burgess Shale and evolutionary convergence which is the process whereby organisms not closely related not monophyletic independently evolve similar traits as a result of having to adapt to similar environments or ecological niches In *The Runes of Evolution* he illustrates how the ubiquity of convergence hints at an underlying framework whereby many outcomes not least brains and intelligence are virtually guaranteed on any Earth like planet Conway Morris also emphasizes how much of the complexity of advanced biological systems is inherent in microbial forms By casting a wider net *The Runes of Evolution* explores many neglected evolutionary questions Some are remarkably general Why for example

are convergences such as parasitism carnivory and nitrogen fixation in plants concentrated in particular taxonomic hot spots Why do certain groups have a particular propensity to evolve toward particular states Some questions lead to unexpected evolutionary insights If bees sleep as they do do they dream Why is that insect copulating with an orchid Why have sponges evolved a system of fiber optics What do mantis shrimps and submarines have in common If dinosaurs had not gone extinct what would have happened next Will a saber toothed cat ever re evolve Cona Morris observes Even amongst the mammals let alone the entire tree of life humans represent one minute twig of a vast and largely fossilized arborescence Every living species is a linear descendant of an immense string of now vanished ancestors but evolution itself is the very reverse of linear Rather it is endlessly exploratory probing the vast spaces of biological hyperspace Indeed this book is a celebration of how our world is and was populated by a riot of forms a coruscating tapestry of life The Runes of Evolution is the most definitive synthesis of evolutionary convergence to be published to date

[The Coconut Palm \(Cocos nucifera L.\) - Research and Development Perspectives](#) V. Krishnakumar,P. K. Thampan,M. Achuthan Nair,2019-02-15 Since the publication of The coconut palm A monograph in 1960 considerable information has been accrued on the crop through work at research institutes international organisations and development agencies Although coconut cultivation is spread over 93 countries providing employment and creating livelihood opportunities to 64 million families around the globe smallholder coconut farmers are now facing numerous challenges The wide gap between the potential and actual yield is a major concern and as such it is necessary to disseminate knowledge in order to implement research findings Coconut research in India one of the leading coconut producing countries is celebrating its centenary making this an opportune time to review the research and development advances and the relevant technologies This detailed comprehensive book covers all aspects of coconut from the origins to cultivation breeding physiology and value

addition as well as subjects of topical interest like nutrition and health biotechnology and climate change and carbon sequestration. Written by leading experts in the fields, it emphasises that the livelihood of the small coconut landholders is the ultimate aim of scientists and developmental agencies and outlines various important strategies to make coconut farming more remunerative globally. It discusses work in all the major coconut growing countries and outlines suggestions for international cooperation. Research work on the crop is comparatively difficult because of its perennial nature, longevity, height, long juvenile phase, large sized nuts, cross pollination and seed propagation. As these special features necessitate greater investment of resources, time and land, it is all the more imperative that research is not duplicated and the information and experience becoming available around the world is shared so that it can be fully utilised. In this context, periodic publications compiling all the available information on coconut assume greater significance. This book is therefore of great value to researchers, students, extension workers, developmental agencies and progressive farmers. **Eco-friendly**
