und Grundrechtsfähigkeit gemischtwirtschaftlicher Aktiengesellschaften Johannes Kater, 2017-01-16 Staatsbeteiligungen an Aktiengesellschaften sind ein weit verbreitetes und aus der Wirtschaftsrealität nicht wegzudenkendes Phänomen. Sind an dem betroffenen Rechtsträger zugleich private Akteure beteiligt, stellt sich verfassungsrechtlich die Frage, ob das Unternehmen insgesamt der staatlichen oder der privaten Seite zuzuordnen ist. Diese Diskussion hat das Bundesverfassungsgericht in seinem Fraport-Urteil im Jahr 2011 erneut befeuert. In einer intradisziplinären Studie untersucht Johannes Kater, welche Auswirkungen die Grundrechtsbindung und die damit korrespondierende fehlende Grundrechtsfähigkeit staatlich beherrschter gemischtwirtschaftlicher Aktiengesellschaften insbesondere für deren private Minderheitsaktionäre haben. Im Fokus stehen dabei die verfassungsrechtlichen Einflüsse auf das Gesellschafts- und Kapitalmarktrecht, wie auch die europarechtlichen Bezüge. **Wireless Information and Power Transfer: A New**

Paradigm for Green Communications Dushantha Nalin K. Jayakody, John Thompson, Symeon Chatzinotas, Salman Durrani, 2017-07-20 This book presents breakthroughs in the design of Wireless Energy Harvesting (WEH) networks. It bridges the gap between WEH through radio waves, communications and power transfer, which have largely been designed separately. The authors present an overview of the RF EHNs, including system architecture and RF energy harvesting techniques and existing applications. They also cover the idea of WEH in novel discoveries of information, the theoretical bounds in WEH, wireless sensor networks, usage of modern channel coding together with WEH energy efficient resource allocation mechanisms, distributed self-organized energy efficient designs, delay energy trade-off specific protocols for energy efficient communication designs, D2D communication and energy efficiency, cooperative wireless networks and cognitive networks.

Vibrio ecology, pathogenesis and evolution Rita R Colwell, Daniela Ceccarelli, 2014-10-24 Vibrios are Gram-negative bacilli that occur naturally in marine, estuarine and freshwater systems. Some species include human and animal pathogens capable of causing gastroenteritis, wound infections, cholera and fatal septicemia. Over the past decades, cutting-edge research on Vibrio genomics has promoted a tremendous advance in our knowledge of these pathogens. Significant developments include the discovery of emerging epidemic clones, tracking the spread of new strain variants and an intensified appreciation of the role of mobile genetic elements in antibiotic resistance spread, as well as pathogenesis. Furthermore, improved

understanding of the interaction of Vibrios with a variety of living organisms in the aquatic environment has documented the significant role of environmental reservoirs in their seasonal cycle favoring persistence of the pathogen during inter epidemic periods and enhancing disease transmission This Research Topic is dedicated to our current understanding in these areas and will bring together leading experts in the field to provide a deep overview of Vibrios ecology and evolution and will suggest the pathway of future research in this field
