Flick, 2008 Construction of portland cement concrete pavements is a complex process A small fraction of the concrete pavements constructed in the United States over the last few decades have either failed prematurely or exhibited moderate to severe distress In an effort to prevent future premature failures 17 state transportation agencies pooled their resources and a pooled fund research project Material and Construction Optimization for Prevention of

Premature Pavement Distress in PCC Pavements was undertaken in 2003 Its purpose was to evaluate existing quality control tests and then select and advance the state of the practice of those tests most useful for optimizing concrete pavements during mix design mix verification and construction This testing guide is one product of that project The guide provides three recommended testing schemes Levels A B and C depending on a pavement s design life and traffic volumes etc that balance the costs of testing with the risk of failure for various project types.
