Category 6 – Right-of-Way Pest Control

Characteristics of Rights-of-Way

[Category 6 Training Manual¹ pp.2-3]

Rights-of-way are areas used for common transport and are typically long and narrow. They include areas along highways, roads, railroads, public airports, electric utilities, pipelines, public drainage ways and irrigation waterways, banks of public barge ways and areas around locks and dams, and public bicycle, bridle, and other public paths or trails.

Rights-of-way are found everywhere and placed in every type of terrain, soil, climate, vegetation complex, and land-use area.

The type of vegetation present include undesirable plants that: 1) create a safety hazard or nuisance; 2) disturb the normal operation or functional activities of the right-of-way; 3) are considered "noxious"; 4) overcrowd desirable vegetation; 5) damage right-of-way structures; 6) provide cover for undesirable wildlife; and 7) are a pest to other crops and cropland if allowed to spread.

The principal goal of vegetation management is to ensure the protection, operation, stability, continuance, and safety of the common transport involved.
