

Mechanical Engineering Interview Que...

Mechanical Interview Question and Answer

What is the difference between shear center flexural center of twist and elastic center?

Ans. The shear center is the centroid of a cross-section. The flexural center is the center of twist, which is the point on a beam that you can add a load without torsion. The elastic center is located at the center of gravity. If the object is homogeneous and symmetrical in both directions of the cross-section then they are all equivalent.

What is the difference between scavenging and supercharging?

Ans: Scavenging is process of flushing out burnt gases from engine cylinder by introducing fresh air in the cylinder before exhaust stroke ends. Supercharging is the process of supplying higher mass of air by compressing the atmospheric air.

What are the names given to constant temperature, constant pressure, constant volume, constant internal energy, constant enthalpy, and constant entropy processes?

Ans: Isothermal, isochoric, isobaric, free expansion, throttling and adiabatic processes respectively?

What is enthalpy?

Enthalpy is the heat content of a chemical system.

In a Rankine cycle if maximum steam pressure is increased keeping steam temperature and condenser pressure same, what will happen to dryness fraction of steam after expansion?

Ans: It will decrease.

What are the factors that can affect the Factor of safety selection?

Ans. The factor of safety is used in designing a machine component. Prior to selecting the correct factor of safety certain points must be taken into consideration such as:
 The properties of the material used for the machine and the changes in its intrinsic properties over the time period of service.
 The accuracy and authenticity of test results to the actual machine parts.
 The applied load reliability.
 The limit of stresses (localized).
 The loss of property and life in case of failures.
 The limit of initial stresses at the time period of manufacture.
 The extent to which the assumptions can be simplified.

Why entropy change for a reversible adiabatic process is zero?

Ans: Because there is no heat transfer in this process.

What is a cotter joint?

Ans. These types of joints are used to connect two rods, which are under compressive or tensile stress. The ends of the rods are in the manner of a socket and shaft that fit together and the
