of the paracrine action of AM in the digestive system In the liver AM immunoreactivity was detected in the parenchymal and stellate cells lining the sinusoid suggesting that AM might play a role in the regulation of hepatic metabolism and circulation In isolated hepatocytes from acutely starved rats the uptake of glucose glycerol and alanine was markedly lower than those from the fed rats A high AM concentration 1000 nM increased the insulin stimulated glucose uptake by more than 2 fold whereas lower AM concentrations 10 and 100 nM reduced the glucagon induced alanine uptake The gene expression of RAMP1 was up regulated by glucose and that of preproAM was increased by glycerol In similar preparations from fed rats 1000 nM AM enhanced the basal and insulin induced glucose uptake Both glucose and glycerol were found to increase the gene expressions of preproAM and RAMP1 These findings showed that AM might play some roles in the modulation of glucose uptake in hepatocytes The present study suggests that acute starvation may increase the secretion of AM in the fundus During chronic starvation the release of AM may be reduced in the liver and fundus but may be augmented in the pancreas and pylorus In isolated hepatocytes from acutely starved rats the uptake of glucose is reduced whereas a high concentration of AM can increase the insulin induced
