The book gives an updated overview of the most recent robotic technology conceived and designed to collaborate with human beings in industrial working scenarios. The technological development of robotics over the last years and the fast evolution of AI, machine learning, and IoT have paved the way for applications that extend far beyond the typical use of robots performing repetitive tasks in exclusive spaces. However, having robots cooperating in real time with workers responding in a physical, psychological, and social adequate way requires a human centred design that not only calls for high safety standards regulating the quality of human robot interaction but also demands the robot's fine grained perception and awareness of the dynamics of its surrounding environment, namely the behaviours of their human peers, their expected actions, responses, fostering the necessary collaborative efforts towards the accomplishment of the tasks to be executed.
