Gemma J. M. Read, Vanessa Beanland, Michael G. Lenné, Neville A. Stanton, Paul M. Salmon, 2017-07-26 Governments and road safety agencies around the world have either introduced or are considering safe system strategies a long overdue acknowledgement that different elements of the road system contribute to road safety outcomes Human factors approaches have a leading role here in both conceptualising the road system as a complex sociotechnical system and in providing practical approaches to support true systems based countermeasures This book illustrates the potential for integrating contemporary systems based human factors methods with modern day driving assessment methods such as vehicle instrumentation and driving simulation to understand and enhance performance in modern day road transport systems The book outlines why a fundamental paradigm shift is needed in the way these systems are designed and operated and illustrates how a wide range of accepted human factors approaches can be applied successfully to road transport to revolutionise the countermeasure design process The practical illustrations of these human factors methods are applied to a long standing road and rail safety issue rail level crossings where the road and rail systems intersect The final chapter of the book highlights the utility of the human factors approach to reducing road trauma and discusses future applications of the approach The Power of Truth Focus Apostle Jesse Duckworth Jr., 2013-06-14

Burnham,David R. Anderson,2013-11-11 We wrote this book to introduce graduate students and research workers in various scientific disciplines to the use of information theoretic approaches in the analysis of empirical data In its fully developed form the information theoretic approach allows inference based on more than one model including estimates of unconditional precision in its initial form it is useful in selecting a best model and ranking the remaining models We believe that often the critical issue in data analysis is the selection of a good approximating model that best represents the inference supported by the data an estimated best approximating model Information theory includes the well known Kullback Leibler distance between two models actually probability distributions and this represents a fundamental quantity in science In 1973 Hirotugu Akaike derived an estimator of the relative Kullback Leibler distance based on Fisher's maximized log likelihood His measure now called Akaike's information criterion AIC provided a new paradigm for model selection in the analysis of empirical data His approach with a fundamental link to information theory is relatively simple and easy to use in practice but little taught in statistics classes and far less understood in the applied sciences than should be the case We do not accept the notion that there is a simple true model in the biological sciences
