

Be careful that you do not exceed the following maximum allowable speeds when accelerating.

| Transfer Control Lever | mph (km/h) |         |         |
|------------------------|------------|---------|---------|
|                        | "1"        | "2"     | "3"     |
| "D"                    | 35 (56)    | 58 (93) | -       |
| "4"                    | 35 (56)    | 50 (80) | 50 (80) |
| "6"                    | 15 (24)    | 34 (40) | 25 (40) |

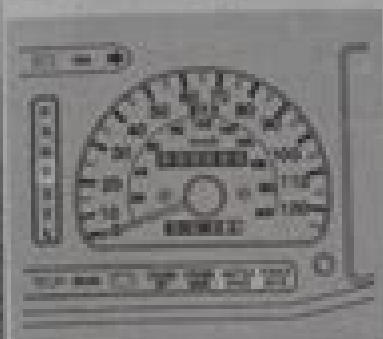

### Driving Pattern Selector

You can select a driving pattern suitable for existing driving conditions.

When neither "POWER" nor "WINTER" lights are on, the normal driving pattern is operative. After the engine

has been started and "D" selected, this program is always operative.

When more powerful acceleration is needed, select the "POWER" driving program. The "POWER DRIVE" indicator light comes on when the driving pattern selector is set in the "POWER" position.

Under inclement weather conditions that cause slippery roads, activating the "WINTER" mode will improve driving operation. The "WINTER" mode may be activated while driving at speeds of 10 km/h (6 mph) or less. Place the transmission lever in the "D" position, then push the "WINTER" button on the console.

The "WINTER DRIVE" indicator light will illuminate whenever the "WINTER" mode system is activated, and the vehicle will start off in third gear.

The "WINTER" mode is deactivated when the vehicle reaches approximately 30 km/h (19 mph), when the transmission is shifted into any position other than "D," by pushing the "WINTER" button again, or by

turning the ignition switch to the "OFF" position.

Operation of this mode should be avoided on slippery roads. Operation of this mode during inclement weather conditions will improve performance acceleration.
