including seven essays in a form he called his ventilated prose and as always addressing the current global crisis and his predictions for the future These essays including How Little I Know What I am Trying to Do Soft Revolution and Ethics put the task of ushering in a new era of humanity in the context of always starting with the universe In rare form Fuller elegantly weaves the personal the playful the simple and the profound Utopia or Oblivion is a provocative blueprint for the future This comprehensive volume is composed of essays derived from the lectures he gave all over the world during the 1960 s Fuller s thesis is that humanity for the first time in its history has the opportunity to create a world where the needs of 100% of humanity are met This is Fuller in his prime relaying his urgent message for earthians critical moment and presenting pioneering solutions which reflect his commitment to the potential of innovative design to create technology that does more with less and thereby improves human lives This is what man tends to call utopia It s a fairly small word but inadequate to describe the extraordinary new freedom of man in a new relationship to universe the alternative of which is oblivion

Buckminster Fuller **Provisional Cities** Renata Tyszczyk, 2017-11-02 This book considers the provisional nature of cities in relation to the Anthropocene the proposed geological epoch of human induced changes to the Earth system It charts an environmental history of curfews admonitions and alarms about dwelling on Earth Provisional cities are explored as exemplary sites for thinking about living in this unsettled time Each chapter focuses on cities settlements or proxy urbanisations including past disaster zones remote outposts in the present and future urban fossils The book explores the dynamic changing and contradictory relationship between architecture and the global environmental crisis and looks at how to re position architectural and urban practice in relation to wider intellectual environmental political and cultural shifts The book argues that these rounder and richer accounts can better equip humanity to think through questions of vulnerability responsibility and opportunity that are presented by immense processes of planetary change These are cautionary tales for the Anthropocene Central to this project is the proposition that living with uncertainty requires that architecture is reframed as a provisional practice This book would be beneficial to students and academics working in architecture geography planning and environmental humanities as well as professionals working to shape the future of cities *A View from the*

From Bauhaus to Ecohouse Peder Anker, 2010-01-01 Global warming and concerns about sustainability recently have pushed ecological design to the forefront of architectural study and debate As Peder Anker explains in From Bauhaus to Ecohouse despite claims of novelty debates about environmentally sensitive architecture have been ongoing for nearly a century By exploring key moments of inspiration between designers and ecologists from the Bauhaus projects of the interwar period to the eco arks of the 1980s Anker traces the historical intersection of architecture and ecological science and assesses how both remain intertwined philosophically and pragmatically within the still evolving field of ecological design The idea that science could improve human life attracted architects and designers who looked to the science of ecology to better their methodologies Walter Gropius the founder of the Bauhaus school taught that designed form should follow the laws of nature in order to function effectively With the Bauhaus movement ecology and design merged and laid the foundation of modernist architecture Anker discusses in detail

how the former faculty members of the Bauhaus school including L szl Maholy Nagy and Herbert Bayer left Nazi Germany in the mid 1930s and engaged with ecologists during their London period and in the U S A subsequent generation of students and admirers of Bauhaus such as Richard Buckminster Fuller and Ian McHarg picked up their program and under the general banner of merging art and science in the design process Bauhaus minded architects began to think ecologically while some ecologists lent their ideas to design Anker charts complicated currents of ecological design thought spanning pre and post World War II and through the cold war including pivotal changes such as the emergence of space exploration and new theories on closed system living in space capsules space stations and planetary colonies Space ecology Anker explains inspired leading landscape designers of the 1970s who used the imagined life of astronauts as a model for how humans should live in harmony with nature Theories of how to design for extraterrestrial living impacted design and ecological thinking for earth based living as well as evidenced in Disney s Spaceship Earth attraction as well as in the Biosphere 2 experiments in Arizona in the early 1990s Illuminating important connections between theories about the relationship between humans and the built environment Anker s provocative study provides new insight into a critical period in the evolution of environmental awareness

Design Ecologies Lisa Tilder, Beth Blotstein, 2012-03-20 Contemporary architects are under increasing pressure to offer a sustainable future But with all the focus on green building there has been little investigation into the meaningful connections between architectural design ecological systems and environmentalism A new generation of architects landscape architects designers and engineers aims to recalibrate what humans do in the world according to how the world works as a biophysical system Design in this sense is a larger concept having to do as much with politics and ethics as with aesthetics and technology This recasting of the green movement for the twenty first century transforms design into a positive agent balancing societal values with environmental needs Design Ecologies is a ground breaking collection of never before published essays and case studies by today s most innovative designers and critics Their design strategies social material and biological run the gamut from the intuitive to the highly technological One essay likens window unit air conditioners in New York City to weeds in order to spearhead the development of potential design solutions Latz Partner s Landscape Park integrates vegetation and industry in an urban park built amongst the monumental ruins of a former steelworks in Duisburg Nord Germany The engineering firm Arup presents its thirty three square mile masterplan for Dongtan Eco City an energy independent city that China hopes will house half a million people by 2050 An essay by designer Bruce Mau leads off a stellar list of emerging designers including Jane Amidon Blaine Brownell David Gissen Gross Max Robert Sumrell and Kazys Varnelis Stephen Kieran and James Timberlake R Sie n Studio 804 and WORKac

Technology with Jacques Ellul David W. Gill,Lisa Richmond,2025-10-07 Twenty first century technology is an ever expanding powerful force in virtually every aspect of human life and every corner of the globe So much of modern technology has resulted in positive improvements in communication work health and other domains Technology s promises and possibilities for the future are often glowing But it is one thing for technology to function as a tool serving human purpose and flourishing and quite another for it to be granted the position of unquestioned master All technologies deserve to be questioned What are their costs trade offs and potential or real negative impact And how do we create limits and controls for technological invasion when these would be wise and necessary Questioning Technology with Jacques Ellul addresses these questions in both the big picture and in their relevance to specific arenas such as art politics work and religion with voices from not just the academy but also the workplace and society The Power of the Periphery Peder Anker,2020-05-28 What is the source of Norway s culture of environmental harmony in our troubled world Exploring the role of Norwegian scholar activists of the late twentieth century Peder Anker examines how they portrayed their country as a place of environmental

stability in a world filled with tension In contrast with societies dirtied by the hot and cold wars of the twentieth century Norway's power they argued lay in the pristine ideal natural environment of the periphery Globally a beautiful Norway came to be contrasted with a polluted world and fashioned as an ecological microcosm for the creation of a better global macrocosm In this innovative interdisciplinary history Anker explores the ways in which ecological concerns were imported via Rachel Carson's *Silent Spring* in 1962 then to be exported from Norway back to the world at the Earth Summit in Rio de Janeiro in 1992 This title is also available as Open Access on Cambridge Core
