

KING KR 87

SILVER CROWN DIGITAL ADF

This is King's "stay-ahead" digital ADF

At the push of a button, King's KR 87 puts more useful information at your fingertips than any other panel-mounted ADF you can buy.

Standing just 1.3 inches high in your Silver Crown stack, this compact TSO'd unit gives you accurate tuning to stations in the 200 kHz to 1799 kHz frequency range. Complete ADF, ANT and BFO tuning modes are provided, along with audio output for station identification and monitoring of AM radio broadcasts.

The KR 87's advanced "coherent detection" design is similar to King's highly regarded Gold Crown KDF 806. It rejects unwanted frequency interference, achieves significantly greater range and has less susceptibility to engine noise, static and atmospheric interference.

And to help you "stay-ahead" of your flight plan, the KR 87's innovative "Eg-Sop" frequency display allows you to switch between pre-selected "standby" and "active" frequencies just by pressing a button.

Both pre-selected frequencies are stored in a non-volatile memory circuit (no "keep alive" battery power required) and displayed in large, easy-to-read self-dimming gas discharge numerals. The active frequency is continuously displayed in the left window, while the right window will display either the standby frequency or the selected readout from the built-in electronic timer. When either of the timer functions are selected, the "active" ADF frequency can be tuned directly by simply turning the selector knobs. This feature is particularly useful when searching for stations with unknown frequencies.

The KR 87's unique digital timer works in two ways. First as an automatic flight timer, it starts clocking whenever the unit is turned on or when an optional external switch (like a gear trim switch) is activated. This lets you keep track of total time enroute for fuel management, dead reckoning, and other navigation functions up to 59 hours, 59 minutes.

Secondly, as an elapsed timer, the separate programmable "stopwatch"

function can be reset to :00 anytime you need to start timing a holding pattern, a correction approach or an individual trip leg.

You can program the elapsed time function to clock forward from :00, or to count down from any preset time interval up to 59 minutes, :59 seconds. When a preset time interval has been programmed and the countdown reaches :00, the display will flash for 15 seconds and an alarm output is provided to activate an optional audio alarm device. As an added backup, the timer will automatically start clocking forward from :00 once the countdown has been completed. And since both the flight timer and elapsed timer operate independently, you can monitor either one without disrupting the other.

You have to see the system in action to really appreciate how simple and useful it is.
