Santa Ana River Guide Patrick Mitchell, 2006-10-17 The Santa Ana River Guide by Patrick Mitchell reveals both the wild and urban sides of the Southland's most important river. The book relates the river's natural and human history, geology, and current conditions and provides all the information necessary to plan an outing on or near the river. It is also a call to action for further protecting and restoring the river. Organized into six geographical sections corresponding to the river's reaches, the book's individual entries include an extensive description of each park and preserve, location and access information, and highlights of what to do there.

Safety Assessment Methodologies for Near Surface Disposal Facilities: Review and enhancement of safety assessment approaches and tools, 2004 The ISAM project involved the review and enhancement of post-closure safety assessment methodologies and tools for both existing and proposed near-surface radioactive waste disposal facilities. The main objectives of the project were to: a) provide a critical evaluation of the approaches and tools used in the post-closure safety assessment of proposed and existing near-surface radioactive waste disposal facilities; b) enhance the approaches and tools used; c) build confidence in the approaches and tools used. In order to help achieve these objectives, the ISAM project paid particular attention to discussing, agreeing, and setting down a safety assessment methodology. The ISAM project primarily focused on developing a consensus on the methodological aspects of safety assessment but also gave considerable attention to illustrating the application of the methodology to three main types of disposal facilities: vault, RADON, and borehole type disposal facilities.
