

Remove this screw and then the filler cap (F) at the top of the chain case. Add oil of the correct grade (see Recommended Lubricants, page 30) and allow to stand until any surplus oil has drained away. Replace the level screw and inspection cap. The machine should be on horizontal ground when this operation is carried out.

A drain plug is provided at (H) for draining the case at regular intervals, see page 29.

### Rear Chain Lubrication

Lubrication is provided by a chain oiler from the rear of the primary chaincase, which provides a metered supply of lubricant, and should keep the chain in good condition. This supply is dependent on correct maintenance of the oil level in the primary chaincase (see page 11). If maximum life is to be achieved, however, periodically remove the chain and wash it thoroughly in gasoline to remove all dirt and grease. Allow the chain to dry completely then immerse it in a tray containing warm graphited grease. When replacing the chain make sure that the spring clip of the connecting link has its closed end pointing in the direction of the chain (i.e., forwards on the top run).

### Rear Chain Adjustment

The rear chain must be adjusted when the wheel is at the lowest point in the suspension. Set the machine on its stand or, in the case of the Special models place a box or similar article beneath the crankcase to raise the wheel clear of the ground. Rotate the wheel slowly

until the tightest point on the chain is found, then check its up and down movement in the center of the chain run. The total movement should be  $\frac{1}{4}$  in. and if it varies from this setting, then the chain must be adjusted by moving the rear wheel, usually in a rearward direction. First slacken the nuts (B) Fig. 20, at both ends of the link (C) (Fig. 20) and then the brake rod adjuster (A). Loosen the spindle head on the right side of the machine by one or two turns, followed by a similar action to the spindle nut (D) on the left side.

Draw both chain adjusters by one or two turns, followed by a similar action to the spindle nut (D) on the left side. Retighten the left spindle nut first and then the main spindle head on the right-hand side. Tighten the link, nuts and then adjust the brake in accordance with the instructions on page 23.

The chain can be considered due for replacement when the wear exceeds  $\frac{1}{8}$  in. per foot of chain length, i.e. for a chain of  $\frac{1}{2}$  in. pitch, the limit for 16 pitches would be 10-7/16 in. (10 in. when new).

NOTE:—One pitch is the distance between two roller centres.

### Clutch Control Adjustment

The main adjustment consists of a screw pin (F) and locknut (G) mounted on the clutch pressure plate. These are accessible after removal of the inspection cover (H) Fig. 21.

FIG. 21. Clutch adjustment and chaincase oil level.

If adjustment is necessary, slacken off the handlebar cable adjuster (A) Fig. 22, and release the cable from the control lever above the timing cover on the right-hand side of the motor. Release locknut (G) Fig. 21, and adjust the pin (F) until the control lever is inclined outwards by a small amount. Add a short length of tubing to the lever to provide additional leverage and disengage the clutch, when
