What is pulmonary rehabilitation?

Pulmonary rehabilitation is an exercise and education program provided by specially trained health professionals. It teaches you the skills you need to exercise safely and to manage your breathlessness.

Who can attend pulmonary rehabilitation?

Pulmonary rehabilitation programs are suitable for people with chronic lung disease. Family members or caregivers are also encouraged to attend the education sessions that may be offered in some pulmonary rehabilitation programs.

What are the benefits?

Research shows that pulmonary rehabilitation is one of the best things you can do to improve your breathing and wellbeing. It also reduces the frequency of Chronic Obstructive Pulmonary Disease (COPD) exacerbations (flare-ups) and helps you stay well and out of hospital.

An improvement in exercise tolerance is one of the main benefits of completing a pulmonary rehabilitation program. This will make normal daily activities such as showering, hanging out the washing, walking or gardening easier. You may also find you don't need as much help to do the things you enjoy.

What does it involve?

Usually pulmonary rehabilitation programs run for 6 - 8 weeks, with two exercise sessions per week. Before you start exercising, a health professional will talk to you about your condition and will ask you to do some different exercise tasks. They will then design an exercise program suited to your needs and symptoms. Once you are confident to exercise on your own you will be given a home exercise program to do on days of the week when you are not at pulmonary rehabilitation. Some pulmonary rehabilitation programs also offer information sessions to help you self-manage your condition.

What topics are in the information sessions?

The content of the information sessions can differ from program to program however common topics include:

- How your lungs work
- Medicines - what they do and how to use them
- Exercise and how it can improve your symptoms
- Nutrition and living well with your condition
- Managing depression and anxiety
- Energy conservation and airway clearance techniques
- Managing breathlessness
- Oxygen therapy.
