Fundamentals of Ground Improvement Engineering

Jeffrey Evans, Daniel Ruffing, David Elton, 2021-09-16 Ground improvement has been one of the most dynamic and rapidly evolving areas of geotechnical engineering and construction over the past 40 years. The need to develop sites with marginal soils has made ground improvement an increasingly important core component of geotechnical engineering curricula. *Fundamentals of Ground Improvement Engineering* addresses the most effective and latest cutting edge techniques for ground improvement. Key ground improvement methods are introduced that provide readers with a thorough understanding of the theory, design principles and construction approaches that underpin each method. Major topics are compaction, permeation grouting, vibratory methods, soil mixing, stabilization and solidification, cutoff walls, dewatering, consolidation, geosynthetics, jet grouting, ground freezing, compaction grouting and earth retention. The book is ideal for undergraduate and graduate level university students as well as practitioners seeking fundamental background in these techniques. The numerous problems with worked examples, photographs, schematics, charts and graphs make it an excellent reference and teaching tool.

Earth Science: the Physical Setting Paola Santagostino, Prentice Hall (School Division), 2005. Focusing on the Earth Science content tested on the Regents Examination, this thorough review guide contains extensive vocabulary, review questions and Memory Jogger and Digging Deeper features. Hundreds of practice questions organized in the Regents Examination format help students familiarize themselves with look and feel of the actual exam.

The failure of the UN climate change summit in Copenhagen in December 2009 to effectively reach a global agreement on emission reduction targets led many within the developing world to view this as a reversal of the Kyoto Protocol and an attempt by the developed nations to shirk out of their responsibility for climate change. The issue of global warming has been at the top of the political agenda for a number of years and has become even more pressing with the rapid industrialization taking place in China and India. This book looks at the effects of climate change throughout different regions of the world and discusses to what extent cleantech and environmental initiatives such as the destruction of fluorinated greenhouse gases, biofuels and the role of plant breeding and biotechnology. The book concludes with an insight into the socio-religious impact that global warming has, citing Christianity and Islam.
