**Oil Spill Response in the Marine Environment** J.W. Doerffer,2013-10-22 The rapid economic development of many countries since World War II has resulted in a considerable increase in the marine transport of raw materials especially of crude oils and in offshore activities Inevitably operational discharges from ships ballast and bilge water incidents such as collisions and groundings and offshore exploration of oil and gas lead to a significant amount of oil going into the sea So far understanding of marine environments of oil and its behaviour when released onto the water surface and of the methods and means of response to an oil spill has been rather limited This book introduces the reader to these problems and reflects the levels and trends of development in the field The author has played an active role in combating marine pollution in the international arena since the 1970s and was awarded the International Maritime Prize for 1989 by the International Maritime Organisation
