Slow Burn R. Jisung Park, 2025-07-29 How the subtle but significant consequences of a hotter planet have already begun, from lower test scores to higher crime rates and how we might tackle them today. It's hard not to feel anxious about the problem of climate change, especially if we think of it as an impending planetary catastrophe. In *Slow Burn*, R. Jisung Park encourages us to view climate change through a different lens, one that focuses less on the possibility of mass climate extinction in a theoretical future and more on the everyday implications of climate change here and now. Drawing on a wealth of new data and cutting-edge economics, Park shows how climate change headlines often miss some of the most important costs. When wildfires blaze, what happens to people downwind of the smoke? When natural disasters destroy buildings and bridges, what happens to educational outcomes? Park explains how climate change operates as the silent accumulation of a thousand tiny conflagrations imperceptibly elevated. Health risks spread across billions of people, pennies off the dollar of productivity, fewer opportunities for upward mobility. By investigating how the physical phenomenon of climate change interacts with social and economic institutions, Park illustrates how climate change already affects everyone and may act as an amplifier of inequality. Wealthier households and corporations may adapt quickly, but without targeted interventions, less advantaged communities may not. Viewing climate change as a slow and unequal burn comes with an important silver lining. It puts dollars and cents behind the case for

aggressive emissions cuts and helps identify concrete steps that can be taken to better manage its adverse effects We can begin to overcome our climate anxiety Park shows us when we begin to tackle these problems locally

The Robot Factory Joseph Ganem,2018-08-27 This book exposes a disturbing misuse of the scientific method to advance policies and agendas that are in fact detrimental to both science and education The author a physics professor examines two related trends in education the practice of data driven reform and the disparaging of the traditional liberal arts in favor of programs with a heavy emphasis on science and technology Many of the reforms being foisted on educators have more in common with pseudo science than real science The reduction of education to a commodity and the shilling of science as a means to enhance corporate profits lead to an impoverished and stunted understanding of science in particular and of education in general How is it possible for schools with all students learning at grade level to be rated as failing teachers to be rated as ineffective after all their students meet their learning outcomes rising grade school math standards to result in more college students needing remedial math politicians to disparage scientists and their results but argue that more students should study science These bizarre outcomes have happened and are the result of an education system that misuses and misrepresents math and science in the classroom and in crafting education policies This book exposes the flawed and fallacious thinking that is damaging education at all levels throughout the United States and makes a compelling case for rethinking the standardized optimized and quantified approaches in vogue in education today to accommodate the different needs of individual teachers and students
