Brett Holverstott, 2025-03-26 When Randell Mills predicted hydrino states of hydrogen and the powerful chemical reaction to produce them it was a quantum leap from a new discovery in physics to a new energy source for mankind Despite skepticism from the scientific community Mills went on to lead a team of scientists and engineers in a decades long effort to show that hydrino was real could be found in nature and could be made in the laboratory The result was the engineering of a new power source the SunCell that uses water as fuel and could bring an end to the era of fossil fuels Meanwhile the science behind the hydrino sheds light on numerous mysteries from the scale of the atom to that of the cosmos **Handbook of Research on Science Teacher Education**

The Filth Disease Jacob Steere-Williams, 2020 Shows how the investigation of local outbreaks of typhoid fever in Victorian Britain led to the emergence of the modern discipline of epidemiology as the leading science of public health Typhoid fever is a food and water borne infectious disease that was insidious and omnipresent in Victorian Britain It was one of the most prolific diseases of the Industrial Revolution There was a palpable public anxiety about the disease in the Victorian era no doubt fueled by media coverage of major outbreaks across the nation but also because Queen Victoria's husband Prince Albert died of the disease in 1861 Their son and heir Prince Albert Edward contracted and nearly succumbed to typhoid a decade later in 1871 The Filth Disease shows that typhoid was at the center of a number of critical debates about health science and governance Victorian public health reformers the book argues working in central and local government framed typhoid as the most pressing public health problem in order to persuade local officials to implement sanitary infrastructure to prevent the spread of disease In this period British epidemiologists uncovered how typhoid is spread via food and water supplies disrupting the longstanding idea that typhoid was spread via filth In the process the modern disciple of epidemiology emerged as the chief science of public health Typhoid was as much a social and political problem as it was a scientific one and The Filth Disease provides a striking reminder of the cultural context in which infectious diseases strike populations and how scientists study them

The Cloud Revolution Mark P. Mills, 2021-11-02 The conventional wisdom on how technology will change the future is wrong Mark Mills lays out a radically different and optimistic vision for what's really coming The mainstream forecasts fall into three camps One considers today as the new normal where ordering a ride or food on a smartphone or trading in bitcoins is as good as it's going to get Another foresees a dystopian era of widespread digitally driven job and business destruction A third believes that the only technological revolution that matters will be found with renewable energy and electric cars But according to Mills a convergence of technologies will instead drive an economic boom over the coming decade one that historians will characterize as the Roaring 2020s It will come not from any single big invention but from the confluence of radical advances in three primary technology domains microprocessors materials and machines Microprocessors are increasingly embedded in everything Materials from which everything is built are emerging with novel almost magical capabilities And machines which make and move all manner of stuff are undergoing a complementary transformation Accelerating and enabling all of this is the Cloud history's biggest infrastructure which is itself based on the building blocks of next generation microprocessors and artificial intelligence We've seen this pattern before The technological revolution that drove the great economic expansion of the twentieth century can be traced to a similar confluence one that was first visible in the 1920s a new information

infrastructure telephony new machines cars and power plants and new materials plastics and pharmaceuticals Single inventions don't drive great long cycle booms It always takes convergent revolutions in technology's three core spheres information materials and machines Over history that's only happened a few times We have wrung much magic from the technologies that fueled the last long boom But the great convergence now underway will ignite the 2020s And this time unlike any previous historical epoch we have the Cloud amplifying everything The next long boom starts now
