Natural Hazard Uncertainty Assessment Karin Riley, Peter Webley, Matthew Thompson, 2016-12-12 Uncertainties are pervasive in natural hazards and it is crucial to develop robust and meaningful approaches to characterize and communicate uncertainties to inform modeling efforts In this monograph we provide a broad cross disciplinary overview of issues relating to uncertainties faced in natural hazard and risk assessment We introduce some basic tenets of uncertainty analysis discuss issues related to communication and decision support and offer numerous examples of analyses and modeling approaches that vary by context and scope Contributors include scientists from across the full breath of the natural hazard scientific community from those in real time analysis of natural hazards to those in the research community from academia and government Key themes and highlights include Substantial breadth and depth of analysis in terms of the types of natural hazards addressed the disciplinary perspectives represented and the number of studies included Targeted application centered analyses with a focus on development and use of modeling techniques to address various sources of uncertainty

Emphasis on the impacts of climate change on natural hazard processes and outcomes Recommendations for cross disciplinary and science transfer across natural hazard sciences This volume will be an excellent resource for those interested in the current work on uncertainty classification quantification and will document common and emergent research themes to allow all to learn from each other and build a more connected but still diverse and ever growing community of scientists Read an interview with the editors to find out more <https://eos.org/editors-vox-reducing-uncertainty-in-hazard-prediction> Climate Change Adaptation in the Built Environment Chamindi Malalgoda, Dilanthi Amaratunga, Richard Haigh, Shavindree Nissanka, Nishara Fernando, Ruben Paul Borg, Mo Hamza, 2025-05-02 Global climate change is one of the greatest environmental threats facing humanity and it is affecting every country on every continent Recent evidence confirms a close liaison between climate change induced hazards and the built environment as the built environment demonstrates a high fragility and vulnerability to hazardous situations The impact of climate change is particularly pertinent to the built environment given the life expectancy of buildings and the fact that it is essential to adapt the existing built environment to deal with a climate that may be significantly different from that in which it evolved Coastal regions are highly vulnerable to climate change because in addition to changes in temperature precipitation and more frequent flooding they will be affected by rising sea levels wave heights and accelerated coastal erosion The built environment exerts considerable influence over coastal communities local climate and environment Coastal areas also tend to be highly populated with many vulnerable urban centres located near the coastal belt In addressing such challenges it is important to better understand the impacts of climate change on the built environment and to develop tangible climate adaptation measures for the built environment
