**Neoliberalism 2.0: Regulating and Financing Globalizing Markets** L. Nijs, 2016-01-26 In today's increasingly globalized environment many economic fundamentals need to be reconsidered in order to regain stability in the global marketplace One such consideration is the failing dynamics of the international tax infrastructure Neoliberalism 2 0 brings a 21st century assessment of the Pigovian taxes considering a completely new calibration of the international tax systems inspired by the historically developed Pigovian tax model The book considers the impact neoliberalism had and will have on regulatory infrastructure democracy in an era of globalization and reduced legitimization of the national state The Pigovian model brings home the often forgotten relationship between taxation as a part of the regulatory sphere macro economics and the political philosophical context in which law and economics emerge The model also takes into account the phenomena of globalization and financialization and is tested using the financial sector as an example This book addresses the many challenges a Pigovian shift would imply for the sovereign and its national economies Neoliberalism 2 0 demonstrates the ability to design a paradigm changing alternative to the current tax infrastructure while taking into account a low economic growth environment of the future the implications of globalization and the changing relationship between citizens and their state

**Dynamics, Strength of Materials and Durability in Multiscale Mechanics** Francesco dell'Isola, Leonid

Igumnov,2020-11-01 This book reviews the mathematical modeling and experimental study of systems involving two or more different length scales The effects of phenomena occurring at the lower length scales on the behavior at higher scales are of intrinsic scientific interest but can also be very effectively used to determine the behavior at higher length scales or at the macro level Efforts to exploit this micro and macro coupling are naturally being pursued with regard to every aspect of mechanical phenomena This book focuses on the changes imposed on the dynamics strength of materials and durability of mechanical systems by related multiscale phenomena In particular it addresses 1 the impacts of effective dissipation due to kinetic energy trapped at lower scales 2 wave propagation in generalized continua 3 nonlinear phenomena in metamaterials 4 the formalization of more general models to describe the exotic behavior of meta materials 5 the design and study of microstructures aimed at increasing the toughness and durability of novel materials     Systems and Computer Technology

**Linguistic Influences on Mathematical Cognition** Ann Dowker,Hans-Christoph Nuerk,2017-06-16 For many years an abstract amodal semantic magnitude representation largely independent of verbal linguistic representations has been viewed as the core numerical or mathematical representation This assumption has been substantially challenged in recent years Linguistic properties affect not only verbal representations of numbers but also numerical magnitude representation spatial magnitude representations calculation parity representation place value representation and even early number acquisition Thus we postulate that numerical and arithmetic processing are not fully independent of linguistic processing This is not to say that in patients magnitude processing cannot function independently of linguistic processing we just suppose these functions are connected in the functioning brain So far much research about linguistic influences on numerical cognition has simply demonstrated that language influences number without investigating the level at which a particular language influence operates After an overview we present new findings on language influences on seven language levels Conceptual Conceptual properties of language Syntactic The grammatical structure of languages beyond the word level influences Semantic The semantic meaning or existence of words Lexical The lexical composition of words in particular number words

 of Low Achievement** Sandra Stotsky,2019-07-02 The chief purpose of this book is to explain how public education in this  
 country became dysfunctional as a result of the education policies and programs funded by the federal government to  
 address low academic achievement It highlights student effort as a central factor in academic achievement based on  
 research noting its significance Teachers and school administrators cannot make children ready for college or career by  
 grade 12 if their parents do not make them ready for school learning by kindergarten or grade 1 Once both the schools and  
 students parents together made students ready for membership in our civic culture They learned they were politically equal

to each other with a shared civic identity regardless of academic achievement Yet policy makers at USED and philanthropists in this country with a professed interest in the education of low achievers want low achievers to believe that their academic status is all that matters and that they haven't succeeded academically because of bigoted teachers administrators and communities Parent school partnerships need to revive their community's agreed upon mission for public education if we are to alter the roots of low achievement in this country

*Extended Abstracts Fall 2013* Maria del Mar González, Paul C. Yang, Nicola Gambino, Joachim Kock, 2015-11-12 The two parts of the present volume contain extended conference abstracts corresponding to selected talks given by participants at the Conference on Geometric Analysis thirteen abstracts and at the Conference on Type Theory Homotopy Theory and Univalent Foundations seven abstracts both held at the Centre de Recerca Matemàtica CRM in Barcelona from July 1st to 5th 2013 and from September 23th to 27th 2013 respectively Most of them are brief articles containing preliminary presentations of new results not yet published in regular research journals The articles are the result of a direct collaboration between active researchers in the area after working in a dynamic and productive atmosphere The first part is about Geometric Analysis and Conformal Geometry this modern field lies at the intersection of many branches of mathematics Riemannian Conformal Complex or Algebraic Geometry Calculus of Variations PDE's etc and relates directly to the physical world since many natural phenomena possess an intrinsic geometric content The second part is about Type Theory Homotopy Theory and Univalent Foundations The book is intended for established researchers as well as for PhD and postdoctoral students who want to learn more about the latest advances in these highly active areas of research
