Educating Tomorrow's Engineers Great Britain: Parliament: House of Commons: Science and Technology Committee, 2013-02-08 In the UK we teach young people to become computer users and consumers rather than programmers and software engineers This is creating a chronic skills gap in ICT We need around 82 000 engineers and technicians just to deal with retirements up to 2016 and 830 000 SET professionals by 2020 On the plus side the Government's proposal to include computer science as a fourth science option to count towards the EBac is welcomed The Committee also welcomes the EBac's focus on attainment of mathematics and science GCSEs but is concerned that subjects such as Design and Technology D T might be marginalised A Technical Baccalaureate TechBac is being designed but if it is to be a success schools should be incentivised to focus on the TechBac by making it equivalent to the EBac Reforms to vocational education following the Wolf Review meant that Level 2 of the Engineering Diploma a qualification highly regarded would count as equivalent to one GCSE despite requiring curriculum time and effort equivalent to several GCSEs The Engineering Diploma however is currently being redesigned as four separate qualifications The Committee also expressed concerns over the Department for Education's DfE lack of clarity on its research budget and use of evidence in decision making The DfE needs to place greater focus on gathering evidence before changes to qualifications are made and must leave sufficient time for evidence to be gathered on the effectiveness of policies before introducing further change The possibility of gathering evidence from randomised controlled trials RCTs should be seriously considered

Pricing Derivatives Under Lévy Models Andrey Itkin,2017-02-27 This monograph presents a novel numerical approach to solving partial integro differential equations arising in asset pricing models with jumps which greatly exceeds the efficiency of existing approaches The method based on pseudo differential operators and several original contributions to the theory of finite difference schemes is new as applied to the Lévy processes in finance and is herein presented for the first time in a single volume The

results within developed in a series of research papers are collected and arranged together with the necessary background material from L vy processes the modern theory of finite difference schemes the theory of M matrices and EM matrices etc thus forming a self contained work that gives the reader a smooth introduction to the subject For readers with no knowledge of finance a short explanation of the main financial terms and notions used in the book is given in the glossary The latter part of the book demonstrates the efficacy of the method by solving some typical problems encountered in computational finance including structural default models with jumps and local stochastic volatility models with stochastic interest rates and jumps The author also adds extra complexity to the traditional statements of these problems by taking into account jumps in each stochastic component while all jumps are fully correlated and shows how this setting can be efficiently addressed within the framework of the new method Written for non mathematicians this book will appeal to financial engineers and analysts econophysicists and researchers in applied numerical analysis It can also be used as an advance course on modern finite difference methods or computational finance **The Times Index** ,2011 Indexes the Times Sunday times and magazine Times literary supplement Times educational supplement Times educational supplement Scotland and the Times higher education supplement *New Statesman* ,1947-07
