 Embodied and Enactive Cognitive Science or E Cognition which considers that cognitive activity does not reduce to the
 intellectual capacities of agents being able to represent their environments E cognition set AI and robotics in a new direction
 in which intelligent machines are required to interact with the environment and where this interaction does not reduce to
 explicit representations or prespecified algorithms These ideas revolutionized the way we think about intelligent machines
 and cognition but these theoretical advances are only partially reflected in modern approaches to AI and machine learning

 systems whether we are considering individual insects e.g. simultaneous localization and mapping or swarm behaviour e.g.
 flocking sensing and ensemble inferences and especially the kinds of flexibility and high level reasoning characteristic of
